GRAND JURY INDICTMENT

THE GRAND JURY, by way of Jordan Viola, District Attorney for Landry County, Texoma, in the name and by the authority of the People of the State of Texoma, charge:

That on or about November 23, 2025, in the County of Landry, State of Texoma, Defendant Charlie Quartz did commit the crime of Negligent Homicide for Failure to Control a Minor in violation of Texoma Penal Code § 41-4; this act punishable by up to ten years imprisonment and a fine of up to \$100,000.

SIGNED: *Marilyn Wood, Grand Jury Foreperson*

DATED: *December 8, 2025*

STIPULATIONS OF THE PARTIES

The parties agree and stipulate as to the following:

I.

This is a criminal trial that will be tried before a jury. This is a bifurcated trial on the issue of guilt only. If the Defendant is convicted of the alleged offense, a separate trial will be held to determine the punishment to be imposed on the Defendant.

There are no lesser-included offenses that will be submitted to the jury, and none are to be argued or suggested by the parties or any witness. The only offense the Defendant is charged with and on trial for is Negligent Homicide for Failure to Control a Minor.

II.

The court has both subject matter and *in personam* jurisdiction over the parties. All questions of fact are being submitted to a jury. Questions of law will be decided by the court.

III.

There are no defects or infirmities with the Indictment, and none shall be argued.

IV.

The Defendant's witness statement, including the addendum signed the day of trial, was given freely and voluntarily, and all of the legal requirements for the taking of said statement and addendum have been met. The Defendant's state and federal constitutional rights—including the right against self-incrimination, right to counsel, and right to due process of law—are not at issue with regard to the statement and addendum. The Court has determined, after consultation with the Defendant and their counsel, that the Defendant has freely and voluntarily waived their Fifth Amendment right not to testify or answer questions at trial.

Therefore, the Defendant may not invoke their Fifth Amendment right while testifying at trial.

V.

Under the relevant Texoma Penal Code statute, to be convicted of the crime of Negligent Homicide for Failure to Control a Minor, the Prosecution must prove the following elements beyond a reasonable doubt:

1. The Defendant had a legal duty to exercise reasonable control over a minor child to prevent the child from intentionally harming others or acting in a way that creates a serious risk of bodily harm to others;
2. From facts known to the Defendant, the Defendant reasonably should have known of the necessity of exercising sufficient control to prevent the minor child from harming others or acting in a way that creates a serious risk of bodily harm to others;
3. The Defendant failed to exercise such control;
4. The Defendant's failure was a direct cause of death to Julien Younger.

The Defendant's failure does not need to be the sole or immediate cause of Younger's death, and there may be more than one cause responsible for the death of a person. It is enough that Defendant's failure to act as required by law was a substantial factor in the chain of events that led to Younger's death.

The first element is undisputed. Only the second, third, and fourth elements are at issue at trial.

VI.

The Court has independently examined Kennedy Dixon, a minor child, and concludes that Dixon is fully competent to testify under the Rules of Evidence.

VII.

The following facts are undisputed:

1. Julien Younger died on November 23, 2025, as a result of Clartaxin poisoning. Younger's death was classified as a homicide.
2. A sample of residue found on the table in Defendant's basement was taken by the Texoma Police Department during the execution of a search warrant on November 25, 2025. The sample tested positive for Clartaxin.
3. Charlie Quartz and Morgan Snyder were married in Texoma on July 1, 2010; they divorced by mutual agreement to dissolve the marriage effective January 1, 2013. The mutual dissolution agreement provided in relevant part as follows: (1) Charlie Quartz obtained sole custody over the couple's only child, Grady Quartz; (2) the marital assets were split evenly; and (3) neither Charlie Quartz nor Morgan Snyder had any future financial obligations, such as alimony or child support, to the other.
4. Other than the residue of Clartaxin found in the Defendant's basement, the Texoma Police Department did not find anything illegal or unlawful in the Defendant's home or on their property at any time.
5. The following calculations are the straight-line distances from the center of the Quartz property:
 - a. Texoma Regional Airport – 4.7 miles to the north-northeast
 - b. Texoma Farmer's Market – 5.9 miles due west
 - c. Texoma High School – 2.1 miles to the west-northwest
 - d. Texoma Pool – 0.8 miles due east
 - e. Kennedy Dixon's house – 0.7 miles due south
6. On December 25, 2025, the Texoma Police Department received a request to perform a welfare check on Maurice Whitacre after he failed to show at a family Christmas dinner. The TPD found Whitacre dead inside his home with no evidence of foul play or forced entry. The Medical Examiner's initial conclusion at the scene was that Whitacre had died from a heart attack approximately four to six weeks earlier. No autopsy was performed, and the body was cremated by Whitacre's family on December 26, 2025.
7. Grady Quartz never consumed or possessed any illegal drugs or illicit substances, including alcohol or recreational drugs, at any time.

VIII.

At all relevant times, no person involved in this case had a romantic, sexual, or any type of physical relationship with any other person involved in this case.

IX.

The Defendant has knowingly, voluntarily, and expressly waived any and all psychotherapist-patient privilege, physician-patient privilege, or any other statutory or common law privacy privileges existing between Defendant, Defendant's minor child (Grady Quartz), and any mental health professional, counselor, or therapist who has provided treatment to the minor child – specifically including, but not limited to, Dr. Enyo Ehd.

The scope of this waiver encompasses all past, present, and future mental health treatment, counseling sessions, psychotherapy sessions, clinical notes, evaluations, and communications regarding Grady Quartz. Accordingly, this waiver removes any bar to admissibility based on any aforementioned privilege, provided the evidence is otherwise relevant and admissible under the Rules of Evidence.

X.

The following is a true and accurate excerpt from Texoma Penal Code:

TPC Sec. 41 – Homicide

Sec. 41-4: Negligent Homicide for Failure to Control a Minor

- A. A person is guilty of Negligent Homicide for Failure to Control a Minor if they
 - a. Have legal custody of a minor child;
 - b. Based on facts known to them, they reasonably should have known of the necessity of exercising sufficient control over the minor to prevent the child from intentionally harming others or acting in a way that creates a serious risk of bodily harm or death to others; and
 - c. That failure is a direct cause of the death of another person.
- B. Negligent Homicide for Failure to Control a Minor is punishable by up to ten (10) years imprisonment and a fine of up to \$100,000.

XI.

All exhibits included in the case materials are authentic and are accurate copies of the originals. No objections to the authenticity of the exhibits will be entertained. The only exhibits to be used at trial are those included in the case packet.

XII.

All of the witness statements were written and signed on the day indicated on those statements. The Addenda are signed on the day of trial, and no continuances have been granted in this case. The signatures on the witness statements, Addenda, and on all other documents are authentic.

No witness had access to any other witness statement before drafting their own original statement. When drafting their original witness statement, each witness only had a copy of the exhibits referenced in their original witness statement; in other words, if a witness does not reference an exhibit in their original witness statement, that witness did not have a copy of that exhibit when writing and signing their original fact statement.

Before writing and signing their addendum, each witness was provided with a copy of the original witness statements of the other five witnesses and every exhibit included in the case materials.

XIII.

Detective Dana Reyne, Chandler Flynn, and Dr. Logan Cobb are to testify on behalf of the Prosecution. They may not testify for or be called on behalf of Defendant. Charlie Quartz, Dr. Enyo Ehd, and Kennedy Dixon are to testify on behalf of Defendant. They may not testify for or be called on behalf of the Prosecution.

XIV.

Exhibit 1 is an aerial photograph of two properties in Texoma. The property on the left is owned by Charlie Quartz, and the property on the right is owned by Maurice Whitacre. Each property is approximately one acre in size. The road at the bottom of the exhibit is FM 147, and north is as indicated. Exhibit 1 is admissible once identified by a witness.

XV.

Exhibit 2 is an email thread sent by Chandler Flynn from Flynn's email account with Texoma High School on the dates and times reflected therein.

XVI.

Exhibit 3 is a true and accurate transcript of the Disciplinary Hearing held on September 18, 2025, that resulted in Grady Quartz's one-week suspension from school. The parties agree the transcript accurately reflects the statements made by each speaker. Exhibit 3 is admitted.

XVII.

Exhibit 4 is the short-form autopsy report of Julien Younger.

XVIII.

Exhibit 5 is a photograph of black swim goggles found in Julien Younger's athletic locker at Texoma High School, which was taken into evidence by the Texoma Police Department on November 22, 2025. The swim goggles were tested by the Medical Examiner, and the photograph in Exhibit 5 was taken by Dr. Logan Cobb on November 24, 2025.

XIX.

Exhibits 6, 7, and 8 are photographs taken by Detective Reyne at the Defendant's home on three separate occasions. The photographs in Exhibit 6 were taken on November 25, 2025; the photographs in Exhibit 7 were taken on November 27, 2025; and the photographs in Exhibit 8 were taken on December 4, 2025.

XX.

Exhibit 9 is a summary of all purchases made by the Defendant's E-Mazon account from January 1 to November 26, 2025. Exhibit 9 was prepared by E-Mazon and provided to the Texoma Police Department on November 27, 2025, with a records custodian affidavit. E-Mazon is the only e-commerce company that delivers products in Texoma. E-Mazon further verified that every item in Exhibit 9 was successfully delivered. Exhibit 9 is admitted.

XXI.

Exhibit 10 consists of handwritten notes by Dr. Enyo Ehd from therapy sessions with Grady Quartz.

XXII.

Exhibit 11 is an International Travel and Document Encounter Summary created by the United States Department of Homeland Security, Customs and Border Protection ("CBP"), and provided to the Texoma Police Department on November 27, 2025. CBP has access to real-time data regarding all United States passports encountered at all international customs and border control checkpoints in Europe, and the parties agree that the information reflected in Exhibit 11 is the only data available regarding the passports of Morgan Snyder and Grady Quartz between November 1, 2025, and the day of trial. Exhibit 11 is admitted.

XXIII.

The Texoma Police Department, Federal Bureau of Investigation, Interpol, and various law enforcement agencies in Europe have continuously searched for Morgan Snyder and Grady Quartz up to the date of trial. A warrant has been issued for the arrest of Grady Quartz for the murder of Julien Younger, and a warrant has been issued for the arrest of Morgan Snyder for aiding and abetting the escape of a fugitive. Grady Quartz and Morgan Snyder are considered "unavailable witnesses" under Rule 804 of the Rules of Evidence.

XXIV.

The Jury Charge and the Verdict Form are accurate and complete in all respects, and no objections to them will be entertained.

JURY CHARGE

All persons are presumed to be innocent, and no person may be convicted of a criminal offense unless each element of the offense is proved beyond a reasonable doubt. The fact that a person has been arrested, confined, indicted for, or otherwise charged with a criminal offense does not create any inference of guilt at trial. The law does not require the Defendant to prove his or her innocence or produce any evidence at all. The presumption of innocence alone is sufficient to acquit the Defendant unless the jurors are satisfied beyond a reasonable doubt of the Defendant's guilt after careful and impartial consideration of the evidence.

The State has the burden of proving the Defendant guilty, and it must do so by proving each and every element of the offense charged beyond a reasonable doubt. If it fails to do so for any element of the charged offense, you must acquit the Defendant of such offense. The State is not required to prove guilt beyond all possible doubt; it is required that the State's proof excludes all "reasonable doubt" concerning the Defendant's guilt.

A "reasonable doubt" is a doubt based on reason and common sense after a careful and impartial consideration of all the evidence in the case. It is the kind of doubt that would make a reasonable person hesitate to act in the most important of his or her own affairs. Proof beyond a reasonable doubt, therefore, must be proof of such a convincing character that you would be willing to rely and act upon it without hesitation in the most important of your own affairs. In the event that you have a reasonable doubt as to the Defendant's guilt after considering all the evidence before you, and these instructions, you will acquit the Defendant and say by your verdict "No – Not guilty."

The parties agree that the Defendant had a legal duty to exercise reasonable control over Grady Quartz, their minor child, to prevent the child from intentionally harming another or acting in a way that creates a serious risk of bodily harm to another.

For the State to prove its case against the Defendant beyond a reasonable doubt, it must prove that, on or about November 23, 2025, in the State of Texoma, three things: (1) the Defendant knew from facts that reasonably should have caused them to know of the need to exercise sufficient control to prevent their minor child, Grady Quartz, from harming another or acting in a way that creates a serious risk of bodily harm to another; (2) the Defendant failed to exercise sufficient control; and (3) the Defendant's failure was a direct cause of the death of Julien Younger.

It is not necessary that the Defendant's failure was the sole or immediate cause of Younger's death, and there may be more than one cause responsible for the death of a person. It is sufficient if the Prosecution proves beyond a reasonable doubt that the Defendant's failure was a substantial factor in the chain of events that led to Younger's death.

Your verdict must be unanimous.

THSMT 010

1 **FACT STATEMENT OF DETECTIVE DANA REYNE**

2
3 I'm Detective Dana Reyne, Texoma Police Department (TPD), Homicide. My last name is unique
4 and versatile, I know. It's pronounced like "rein" or "reign" or "rain." I'm 40 years old and joined
5 the Homicide Unit about six months ago. This is my first homicide investigation that will go to
6 trial. I have known Charlie Quartz and their son, Grady, since May of this year. That's because I
7 responded to several incidents involving Grady's bad behavior – and Charlie's bad parenting.
8

9 Before we get into all of that, a little background. I am single, never been married, and I've never
10 been happier. I do not have any children of my own, but I have six nieces and nephews that I visit
11 and babysit every chance I get. They are amazing kids who are supremely well-behaved. That's
12 no surprise given our family's military background. My father, brother, sister, and I all signed up
13 to protect and defend this great country as soon as we finished high school. I joined the United
14 States Navy in 2004, where I served on active duty for six years. After leaving active duty, I
15 worked for several years as a civilian investigator with the Naval Criminal Investigative Service,
16 NCIS, primarily handling cases involving theft, fraud, and other criminal activity affecting Navy
17 personnel. I later returned home to Texoma in 2014 and joined the local police department, TPD,
18 where I have served ever since.
19

20 I can confirm the exact date I first met Grady and Charlie Quartz: May 24, 2025. Maurice
21 Whitacre, who lived next door to Charlie Quartz, called to report his e-Bike had been vandalized
22 – and he was certain the boy next door was the culprit. I went to Whitacre's home and inspected
23 the e-Bike. I noted clear signs of tampering. Its front wheel had separated from the frame; there
24 were missing screws that should've held the wheel in place. Whitacre told me he always leaves
25 the bike outside plugged into an outlet by the garage. Whitacre's property is on the righthand (or
26 east) side of Exhibit 1. Whitacre said he'd taken the bike out to check his corn. Whitacre hit a
27 small bump and the front wheel completely separated from the bike. I observed a few minor cuts
28 and scrapes on his face and arms, consistent with a fall like he described. Whitacre named the
29 suspect boy – Grady Quartz. Whitacre also said his wrench was missing and that Grady had shot
30 down his drone a few months earlier, but the kid and their parent, Charlie, had denied everything.
31 It was obvious to me Whitacre was still obsessed over the matter – and with Grady. I asked if he
32 still had the damaged drone; Whitacre said he never found it. I asked if he had filed a police report;
33 Whitacre said he hadn't because he thought no one would believe him without the wreckage.
34

35 I then went to Quartz's home, which was the adjacent lot to the west of Whitacre's. Next door,
36 technically, but still about 200 feet between the driveways so I drove from one to the other. There,
37 Charlie Quartz told me they didn't know anything about the neighbor's e-Bike, but actually had a
38 lot to say about Whitacre. Charlie told me about the confrontation over the drone and that Whitacre
39 had been belligerent towards Grady. Charlie declared no guns were in the house to shoot down
40 any drone. Charlie said Whitacre had some unexplained hatred towards Grady and seemed to want
41 to blame the kid for anything and everything.
42

43 I asked to speak with the boy. Charlie agreed to let me question Grady in their presence. Grady
44 denied doing anything to the e-Bike, but I got him to admit he knew about Whitacre's e-Bike and
45 where it was stored at night. I could tell Charlie also didn't believe the story Grady was trying to
46 sell me, so I left Charlie to handle things when they told me they would punish Grady if they found

1 any proof. I told Charlie to be on the lookout for any lockpicking sets or tools since, in my
2 experience, that was an extremely common item for a mischievous boy. Lockpicking sets are
3 technically legal to purchase, but they instantly become criminal tools when used for illegal
4 purposes. Charlie said Grady would never have something like that but promised to be on the
5 lookout. I also said, “we both know your son snuck onto that property; how else would he know
6 all that about where the bike was stored.” Charlie nodded.

7
8 TPD received a second call from Whitacre a few weeks later at 7 a.m. on June 5. This time,
9 Whitacre said Grady had thrown a balloon of purple paint on his car in the middle of the night. I
10 headed back to Whitacre’s. There indeed was purple paint all over the car. Whitacre was very
11 agitated and demanded that I go arrest Grady for it. I asked how he knew it had been Grady.
12 Whitacre said they had seen his car – paint free – when he went inside for the night around 10 p.m.
13 but he knew Grady would skulk around their property in the middle of the night sometimes. I saw
14 a piece of balloon on the ground that I took into evidence, but it was obviously a very generic type.
15 I went to Charlie’s home, explained what had happened, and asked to come inside. Charlie agreed
16 and said it was impossible for Grady to have been involved with Whitacre’s car. Charlie assured
17 me that Grady had not left the house after going to bed around 8:00 p.m. Charlie claimed they had
18 insomnia and had been up the entire night in the living room – which I noted was in the center of
19 the house right off the front door with a direct view to a bedroom door with Grady’s name on it.
20 Honestly, Charlie did look pretty sleep deprived.

21
22 I pressed Charlie and asked if they actually had eyes on Grady the entire night, to which Charlie
23 said no – but that they would have known if Grady had left the house. Charlie added that they
24 have a security system that beeps if any window or door is opened, pointed out the keypad on the
25 wall, and told me to open and shut the front door again. I did. There was a clearly audible beep,
26 but that proved nothing. I asked for permission to search the entire house. Charlie’s demeanor
27 quickly soured; they looked at me with narrow eyes and refused. Charlie pointed to the front door
28 as if telling me to leave, so I tried one more approach and softly asked if there was any purple paint
29 in the house. Charlie said there were several colors of paint in the basement, purple included,
30 which they claimed had been used to redecorate the kitchen. There was purple on the walls that
31 looked like the color on the car. I knew Charlie wasn’t going to let me in the basement, so I asked
32 if they had any balloons. Charlie confirmed they had purchased some for Grady’s birthday in
33 January and yelled for Grady to bring the balloons to the front door. The kid emerged from his
34 room looking like he just woke up with a bag of generic balloons in his hand.

35
36 Grady handed me the bag and said, “Here you go, the most popular size of the most popular brand
37 of balloons in Texoma.” Grady wasn’t wrong but he gave me a slow smile after he said it – and
38 that told me everything. I knew Grady was involved but I couldn’t prove it. So, I left with stern
39 warnings to both Charlie and Grady that there would be no further second chances. I specifically
40 told Charlie to keep a very close eye on Grady – since it was clear that he had snuck out in the
41 middle of the night and trespassed on Whitacre’s property. I was animated then; I will admit that.
42 But I was afraid Grady was going to get someone hurt or killed if he wasn’t disciplined. I loathe
43 the fact that I was right.

44
45 It was the evening of June 17 when I found myself back at the Quartz house. An air traffic
46 controller at Texoma Regional Airport called the TPD saying that multiple pilots had reported

1 being hit with a laser beam during final approach and departure – and that the laser was coming
2 from southwest of the airport – precisely the neighborhood where the Quartz house was. I will be
3 honest – I was pretty fed up with Grady at this point. As a Navy veteran, I know full well how
4 dangerous a laser is during aircraft landing. Not to mention how dangerously reckless it can be to
5 a pilot; it can actually blind people. So, I raced myself over to Charlie’s home hoping to see the
6 laser beam coming from the home with my own eyes, but I didn’t see any laser beams. As I turned
7 down the road toward Charlie’s house, I saw Whitacre running down his driveway to the street
8 trying to wave me down in front of his house. I slowed and Whitacre asked me if I was there about
9 the laser beam. I said yes. Whitacre then pointed to Charlie’s house and said, “you’ll find it there.
10 I am certain.”

11
12 I continued to Charlie’s home and spotted Grady running around the near side of the house toward
13 the street. I got out of my police car, and Grady said, “Well, hey, copper, you here to try and
14 search the house again?” Charlie came around the house right after that and probably didn’t hear
15 Grady’s smart-alecky comment, so I ignored the kid. I explained why I was there and that the
16 laser was seen coming from their house within the last hour. “You’re not much of a detective
17 then,” Charlie snapped at me. “We’ve both been outside near the firepit in the back for the last
18 two hours. I’ve had eyes on Grady the whole time, and I haven’t seen any laser from anywhere.”
19 Grady then turned out his pockets in this half-hearted dramatic show.

20
21 I asked if I had permission to search around the property since I knew Charlie would refuse to let
22 me search inside the home. Charlie said, “not without a warrant.” It would have been wasted
23 effort anyway. Laser pointers are very small and compact. Grady easily could have hidden it
24 somewhere on their acre property that would take ages to find, if ever. As I was leaving, Charlie
25 did tell me – sternly – that they were quite tired of me invading their home and family. I admit
26 that I responded that I was quite tired of their “bad parenting and wayward son,” and that if we
27 met again, “one of you is probably going to jail,” but I otherwise took the high road in that
28 exchange. I told Charlie to check their online orders and any packages that arrived because I
29 suspected Grady had ordered the laser pointer online – and probably all the other things he used
30 for mischief. Charlie said they knew about every package delivered to their house because they
31 never leave the property.

32
33 I didn’t think about the Quartzes for several months after that, but Grady was in the center of my
34 radar after everything that happened at the swim meet on November 22. I was at a late lunch with
35 some fellow officers and heard the call come in on someone else’s radio – medical emergency at
36 the THS pool. I raced out of the restaurant and drove straight there. I found a male student on the
37 locker room floor with an adult trying to hold the student who was violently spasming. I started
38 to check for a pulse and heartbeat, both were racing. Then the EMTs arrived, so I stepped back to
39 let them do their work. I started looking around the locker room for any evidence. I searched the
40 trash cans but didn’t see anything that stood out; everything was still bagged for evidence, though.
41 After the EMTs took the victim to the hospital in the ambulance, I searched through that student’s
42 athletic locker after the coach pointed it out to me. I did not see anything then, but we bagged
43 everything for further analysis back at the station.

44
45 The victim – Julien Younger – died at the hospital the next day. The autopsy was performed by
46 Dr. Logan Cobb, the medical examiner, in the morning of November 24. I spoke with Dr. Cobb

1 immediately after getting the autopsy report in Exhibit 4 and learning the cause of death was poison
2 by some toxin called Clartaxin. Dr. Cobb had also found traces of the same toxin inside the
3 victim's swim goggles – Exhibit 5. This was now officially a murder case. I needed to know how
4 someone would make the poison – to know what to look for as evidence during search warrants.
5 Dr. Cobb explained there were three general ingredients needed to make this specific poison –
6 herbicide, deodorant, and detergent. But only specific types of each would work; they had to have
7 certain chemical compounds that would be extracted to make the poison. Dr. Cobb said almost all
8 the common detergents and deodorants would work, but the herbicides with the necessary
9 chemical had been banned in Texoma for at least ten years. Dr. Cobb also said that creating
10 Clartaxin from these ingredients would take time and emit a very strong rotten egg smell that
11 would be hard for someone to miss.

12
13 Over the next day and a half, I interviewed witnesses to determine if anyone had a reason to hurt
14 or kill Younger. Motive. One of those interviews was with Chandler Flynn, a teacher and swim
15 coach at the high school. Flynn immediately pointed the finger at Grady as someone with a grudge
16 against Younger, something to do with try-outs for the swim team. In the afternoon of November
17 25, I begged the district attorney to get a search warrant for the Quartz home, and they said it
18 would take time, but I decided to drive over there anyway. On the way, I was alerted that Grady
19 had already left the country on a flight to France – but that's all we knew at the moment. I instantly
20 phoned the DA. Finally, I got my search warrant. It was clear to me the kid had fled, after all. I
21 handed the search warrant to Charlie, admittedly with a very proud smile, and tore into them
22 demanding to know where Grady was. Charlie said he was in Europe with Morgan, Charlie's
23 former spouse, but I already knew that. We then tore the house apart looking for anything
24 connected to Younger's murder or Grady's location. We called in a dozen officers who searched
25 every square inch of that property. The small shed in the back, the garden, the greenhouse, the
26 ground floor of the house, and the basement – all of it. You can see all of those spots in Exhibit
27 1; the property on the left side.

28
29 We quickly found dangerous looking lab equipment in the basement, exactly the type that I figured
30 would be used to create the poison or some other illegal concoction. And scary looking too – look
31 at the first page of Exhibit 6, which is a picture I took of it when we first entered the basement.
32 We took all of that stuff into evidence, carefully, along with some protective equipment we found
33 there. In the house, we found detergent and deodorant that matched the type that could be used to
34 create Clartaxin, even though I have purchased both brands myself. But no banned herbicides
35 anywhere, including the trash. However, an eagle-eyed crime scene tech took a sample of a small
36 spot of residue near all the lab equipment in the basement, which we sent to Dr. Cobb for testing.
37 The second page of Exhibit 6 shows that residue spot next to the yellow evidence marker.

38
39 BINGO – it contained Clartaxin just like what Dr. Cobb had identified in Younger as the cause of
40 death and found inside the swim goggles. I was instructed to arrest Grady for murder, and I started
41 by interrogating Charlie at the station for more than two hours early on November 26. So I could
42 get a lead on where the kid was. It was only then that Charlie admitted that they had organized
43 the plan for Grady to flee Texoma. Charlie said they were afraid people would blame Grady for
44 Julien's death, Grady had already dealt with false accusations, been to a bunch of therapy, and had
45 been a perfect kid for a while. Charlie said they called Morgan to explain, Morgan hopped on the

1 very next flight from France to Texoma. Charlie raced Grady to the airport to make the handoff.
2 Grady and Morgan then fled to France on the very next flight out. Innocent people don't run.

3
4 We dug into what Charlie had finally admitted. Morgan apparently could fly for free as a senior
5 executive with a French airline, Paris Air, and presumably was able to get tickets at the last minute
6 too. Airline records showed they had return tickets to fly back to Texoma on November 30, but I
7 wasn't about to wait. They were clearly on the run. We linked up with Interpol, the European
8 police equivalent of the FBI, and we pulled the cell phone records for Grady and Snyder. We also
9 attempted to locate both phones by pinging them, which we tried nearly 100 times, but we received
10 no response – just the “not in service” response. The last logs appeared to show both of their
11 phones geolocated in Paris right after they landed, but then – nothing. That meant both phones had
12 been destroyed. That takes deliberate effort. Innocent people don't destroy their phones.

13
14 I was getting frustrated with the lack of progress we were making to find Grady – even though we
15 were getting extraordinary effort and help from our European counterparts. We received the log
16 in Exhibit 11 showing the passport encounters for Grady and Morgan. Even Paris Air, Morgan's
17 employer, was incredibly helpful with giving us information and giving free flights for some of
18 the European officers to search throughout Europe. They seemed genuinely concerned about
19 finding their employee. Back in Texoma, I got a second search warrant for the Quartz home and
20 property, and we searched the whole place again on November 27. I'm not sure how we missed it
21 the first time, but I discovered a hidden compartment in the floor of Grady's room. Something
22 didn't feel right when I stepped on that spot, so I tore back the carpet and found the hidden space.
23 Charlie claimed they'd never seen it before.

24
25 Inside, I found a treasure trove of evidence – lockpicking tools, a laser pointer, a shirt with purple
26 paint splatter, the exact French herbicide Dr. Cobb had said could be used to make Clartaxin, and
27 a bunch of other items associated with criminals. Those are in the bottom picture of Exhibit 7, and
28 the compartment I found in Grady's room is seen in the top picture. That's my screwdriver you
29 see in that top picture; I used it to pry up the carpet and the top wooden piece, which is not pictured.
30 I was especially excited by the hard drive, camera, and memory stick you see in the bottom left
31 corner of bottom picture in Exhibit 7, but they were all empty or wiped. Highly suspect. Innocent
32 people don't wipe their electronics. I almost missed what number eight is; it looked like a normal
33 rugged flashlight. But we realized it was actually a device that emits invisible radio frequencies
34 to disrupt certain electronics like security cameras. We tested it on one of the cameras at the station
35 and the feed glitched to a black screen when we did it. After that, we checked every inch of the
36 Quartz house and property, even using sonar to make sure there were no more hidden places. We
37 found nothing more.

38
39 We hauled Charlie back to the station for further questioning. I had just received a list of
40 everything ordered on Charlie Quartz's E-Mazon account in the calendar year, which is Exhibit 9.
41 I confronted Charlie with the list, and they claimed not to have ordered several things and had
42 never seen them at the house – the confetti bomb and laser pointer. I countered that Charlie had
43 previously said they knew everything that was delivered. Charlie had nothing to say about that.
44 Charlie repeatedly said they knew nothing about Younger's murder, the toxin, or any dangerous
45 experiments Grady was doing in the house. I specifically asked if there had been any strange or
46 foul odors in the last few weeks. Charlie admitted remembering a rotten egg smell about two

1 weeks before the swim meet. Charlie said Grady had explained the smell as part of an experiment
2 he was doing to prepare for a school science fair. Charlie had seen Grady's friend helping with
3 the experiment on two separate days. Charlie said Grady had done numerous experiments in the
4 basement before, sometimes for classwork and sometimes for fun. When I asked Charlie if they
5 had been looking at or monitoring their son's online activity or searches on his laptop, Charlie said
6 "no, I had no reason." A total parental failure. Of course, Grady took the laptop with him when
7 he fled to Europe, so we were unable to do any forensic testing or analysis of that laptop. I decided
8 to try a different approach and talk to Grady's friends at school, but Grady apparently only had
9 one friend. Kennedy Dixon was a sophomore and Grady's lab partner in Coach Flynn's science
10 class; Dixon also spent significant time in the Quartz home, including the basement where Grady
11 created the poison used to kill Younger. I visited the Dixon house, which was less than a mile
12 straight south of the Quartz property, but I did not receive a very warm welcome. Just my luck,
13 both of the Dixon parents are lawyers, and they let me know that in the first sentence. They
14 instantly refused to let me talk to Kennedy, even in their presence, and then argued with me about
15 it even after I gave up and walked away.

16
17 We continued to search for Grady, but I kept thinking more about Charlie failing to stop him from
18 committing the murder. I spoke several times with Dr. Cobb about the process to create the toxin.
19 Dr. Cobb said the process would be impossible to miss if Grady did it inside the home. So, the
20 district attorney let us conduct an experiment – to have Dr. Cobb create the same toxin inside
21 Charlie's home to see what happened. There was a putrid rotten egg smell when Dr. Cobb started
22 to mix later on December 3 – and that's when I also had a eureka moment. The place reeked so
23 bad of rotten eggs that I begged Dr. Cobb to open the window in the basement, the one above the
24 lab table. Dr. Cobb did and I realized I didn't hear a beep – the security system didn't beep. After
25 Dr. Cobb finished their experiment, I went back and repeated the process several times, and then
26 with every other window and door. The basement window was the only one that didn't set off a
27 beep from the security system. I examined the window from the outside and then asked another
28 officer who was tall and slender like Grady to try and get out of the window. It wasn't easy, and
29 we had to help him out, but he got out. So that proved how Grady had been able to sneak out of
30 the house, at least to me. You can see the pictures I took of that window from the outside in Exhibit
31 8. I could still smell the rotten eggs right up to the time we left the house late on December 4.

32
33 The Grand Jury indicted Charlie for negligent homicide on December 8. We arrested Charlie
34 about an hour after the Grand Jury came back with a true bill, and they were released after a bond
35 hearing. But there were very strict rules on Charlie's movements; they could not leave Texoma
36 for any reason. If I could sum this case up: Charlie failed to "rein" Grady in, so it is time to let
37 justice "rain" down on Charlie to give them a wake-up call.

38
39 Further affiant sayeth naught.

We've been monitoring Charlie Quartz for more than a year now. Every phone is tapped, we read every piece of mail, open every package, and track every movement. Charlie never leaves their property except for the farmer's market on Saturdays; it's uncanny. We've seen nothing in those searches and taps. Not a single sign or whiff of Grady or Morgan. Charlie isn't allowed to leave Texoma as part of their bond conditions, but that hasn't stopped them from these massive fundraising campaigns at the market. There have been so many protestors that I stopped going but one of my colleagues is usually there to try to help keep the peace. I just buy everything at Partial Foods now. It's more expensive, but there aren't any crazies.

This concludes my sworn testimony.

DETECTIVE DANA REYNE

FACT STATEMENT OF DETECTIVE DANA REYNE

FACT STATEMENT OF CHANDLER FLYNN

My name is Chandler Flynn, but you can call me Coach Flynn. I insist. I'm 35 years old and have been teaching science and coaching swimming at Texoma High School (THS) for the last nine school years. Home of the Texoma Terriers – go, fight, yip! I teach AP Biology, AP Chemistry, Biology II, and Chemistry II – the last two are the courses most students take before they can take either AP class. But some students are placed in AP classes immediately based on test scores from middle school and the summer before their freshman year. I'm on the Discipline Board at THS, which is made up of two teachers and the principal, and we review the more serious student disciplinary matters and determine any appropriate punishment. I have been on that Board since May 2024, and I believe we deliver appropriate justice and remediation in all cases.

I'm also the head swimming coach for the Varsity and Junior Varsity swim teams at THS, a job I've had since I joined THS in 2016. I have two assistant coaches – one for each team – but I run all swim practices, try-outs, and competition strategy. As for my own schooling, I graduated from THS myself in 2010 and attended Texoma A&M University. I graduated *cum laude* with a double major in Chemistry and Physical Education in 2014. I also swam on the University Swim Team; my teammates and coaches called me the "Fin" back then. Right after college, I served with Teach for America teaching middle school. I did that for two years before joining THS. I badly wanted to teach swimming and science; THS offered both. It was a perfect fit.

This whole case has been a nightmare for me and the students. I'm glad to be able to testify against Charlie Quartz. Given what they knew Grady was up to before the killing, Charlie bears full responsibility for this murder. Charlie should have absolutely seen this coming. I first met Grady at the beginning of the 2025-26 school year. School started on August 18, 2025. Grady had tested into my AP Chemistry class, the only freshman in AP Chem that semester. The rest of the class were mostly seniors with a handful of juniors and three sophomores. I remember there were three sophomores because I assigned one of them, Kennedy Dixon, to be Grady's lab partner. I always found it best to pair students in the same year or close to the same year as possible; pairing freshmen with seniors had never proven successful to me.

I hold try-outs for the Varsity and JV swim teams in late August or early September every year. No one is guaranteed to make any team, even if they were on a particular team the year before. The try-outs are pretty standard for a high school swim team. After stretching and warm-ups, we evaluate each student's technique in the four major strokes (freestyle, backstroke, breaststroke, and butterfly) as well as their starts, turns, and finishes. Then, the students compete in two timed events: a 100-yard freestyle, and a 200-yard medley where they race one length doing each of the four major strokes. The timed races are the most crucial for team assignment, as it evaluates actual race ability, conditioning, and endurance. Of course, I am also watching for signs of strong work ethic, a team mentality, and a willingness to listen and accept instruction. Forty-eight students tried out for the swim teams on August 29. I had room for 15 on the Varsity team and 12 on the JV team. One of my assistant coaches told me about Grady before try-outs, and it sounded like Grady had considerable swim talent for a freshman. I always keep an open mind – for new students and returning students – when making selections for each team.

1 I posted the teams on the bulletin board in the locker room the morning of September 2, the day
2 after Labor Day. Grady made the JV team. While I had toyed with putting him on Varsity, Grady's
3 200-yard medley was slower than most of the other students – and much slower than I would have
4 anticipated based on their 100-yard freestyle time. After I posted the teams, Grady approached me
5 after class and claimed that Julien Younger, a senior and Varsity Captain, had fudged with his
6 medley race time. Julien had the stopwatches for two lanes during the 200-yard medley along with
7 me and the two other coaches, and I know Julien did time Grady during the medley. But I saw the
8 stopwatch time myself – it's not like Julien just made it up out of thin air. Grady said Julien must
9 have started their stopwatch early, but I never considered that a possibility based on what I knew
10 about Julien's honesty, leadership, and even temper.

11
12 Pretty soon after that, I noticed increasing tension between those two – in class and during swim
13 practice. Mostly, Julien would make some snide remarks at or about Grady. That would get all
14 the other seniors laughing and giggling. I wouldn't say Julien was bullying. It was maybe close
15 to the line if you're sensitive, sure, but nothing that serious. Still, I put a stop to the teasing every
16 time I witnessed it. It was maybe a week after try-outs – September 8 – when things started to
17 escalate. I was trying to start my AP Chemistry class and was telling students to stop chatting and
18 take their seats. Julien went to sit down and his whole desk collapsed on itself. I was worried that
19 Julien might be hurt – he was my best swimmer after all – but he seemed to be OK other than a
20 little ego bruise. Julien pointed right at Grady and said he knew Grady had done it; Grady just
21 grinned back at Julien, this slow sly little grin. I could tell Julien was getting worked up, so I sent
22 him to the nurse to make sure he was OK. Grady was also whispering at the time with Kennedy,
23 but I couldn't hear what they were saying. I looked at the desk heap, and it was clear to me there
24 were a bunch of screws missing. The ones from the joints that held the desk together. Since Grady
25 was clearly the obvious suspect, I searched his backpack but there was nothing. He offered to let
26 me search him, but I knew that was exactly what he wanted. I couldn't punish him since I didn't
27 have any actual evidence, but I told Grady very clearly to knock off any more pranks on Julien. I
28 also sent an email note to Grady's parent, Charlie, so they knew what their son had been doing –
29 and to inform them that I believed Grady was set on getting back at Julien in some way based on
30 what I had overheard him saying to Kennedy a few times.

31
32 Two days later, there was a pretty loud bang outside my classroom. I ran out to see where the
33 noise came from and saw Julien was on the ground near his locker. He was caked in sparkly blue
34 and pink confetti, which was everywhere in the hallway. A few of the other students were
35 snickering – until Julien yelled at them to stop. Julien got up and punched one of the lockers hard.
36 Really hard. I told Julien to calm down and checked on him, his face and his right hand. There
37 were a few pieces of confetti that had gotten into Julien's eyes, and we washed that out using one
38 of those eye-wash stations in each science classroom. Julien seemed alright after that and
39 fortunately his hand wasn't broken or anything. But I remember Julien told me he was going to
40 get back at Grady for it. I didn't see Grady in the hallway at the time. Secretly, I also thought
41 Grady had set the confetti bomb. I didn't say that to Julien, of course.

42
43 There was a school investigation into that prank, but the security footage from the hallway was too
44 grainy and crowded to definitively see Grady – or anyone else, frankly – put the confetti thing in
45 Julien's locker. But about ten minutes before the last class let out, the video sort of glitches to a
46 black screen and stays there for about two minutes until it fizzles away. Class lets out a few

1 minutes later, and Julien is blasted with confetti a minute after that. The cameras also only run
2 during the day, so it's always possible Grady broke into the school overnight and set the thing in
3 Julien's locker, but I'm just guessing based on what I know about Grady. Breaking and entering
4 is right up Grady's alley. Although I've never heard of any report of anyone breaking into the
5 school during my entire time here. They do keep the place locked up real tight these days.

6
7 I questioned Grady the next morning along with the principal about the confetti bomb, but he
8 denied having anything to do with it. A likely story. I could see the same smug grin hiding under
9 the surface of Grady's face – he had definitely done it. And he relished he was getting away with
10 it. On the way out, Grady said he was looking forward to the lab experiment we were doing on
11 Monday. It sounded genuine, and Grady was a good student, so I didn't pay any mind to it then.
12 I sent another message to Charlie about Grady and asked for a meeting to discuss Grady's behavior.
13 Both of my emails to Charlie Quartz are in Exhibit 2; emails like those were how I regularly
14 communicated with parents about their kids. It's always better to have those things in writing than
15 trying to have a phone call; things get misheard and just trying to get anyone on the phone these
16 days is a hassle.

17
18 On Monday, September 15, we were doing a fairly simple lab experiment in chemical kinetics,
19 which is a standard part of the AP Chemistry curriculum. The purpose of the lab was to
20 demonstrate how changes in variables, like concentration and temperature, can affect the rate of a
21 chemical reaction. Students had performed this specific experiment in prior years, always without
22 any issues. Instead of having students mix chemicals to create the various solutions they need, I
23 create those myself prior to the lab and put them in each lab station right before class starts. This
24 also ensures students don't know exactly what the solutions are. The students' job was to measure
25 specified amounts of those solutions, combine them in a sequence described in their instructions,
26 observe what they saw, and record the time required for the reaction to reach a designated endpoint.

27
28 The expected reaction was not supposed to be dramatic. No flames, no explosion, no significant
29 release of energy. The students were supposed to see a gradual observable change in the mixture,
30 record the reaction time, and then repeat the experiment under slightly different conditions. Five
31 minutes into the exercise, I heard Julien yell, "Woah Coach, I'm cooked!" I looked over and saw
32 his glass vessel shatter across the lab station with glass fragments everywhere. The heat or smoke
33 from the blast set off the school's fire protection sprinkler system. Water was pouring from the
34 ceiling. I immediately stopped the exercise and directed students into the hallway – and then
35 outside using the evacuation route. Several kids in my class had a few minor cuts from the glass
36 shards, Julien included, but no one else had any injuries. Everyone was evaluated by the EMTs
37 who arrived with the fire department and, fortunately, everyone was OK.

38
39 At first, I could not explain what happened. I check the equipment before every lab class, and I
40 personally test all solutions and ingredients that will be used during experiments to ensure safety
41 of the students and the school. I am certain that I provided the proper solutions for the experiment,
42 and no issues had ever occurred in the years I've held that experiment in class. Now, though, I am
43 certain Grady had to have made a switch in Julien's lab stuff. I just can't tell you how he did it.
44 However he did it, he got Julien to unknowingly combine two solutions that are highly volatile
45 when combined. That released a significant amount of energy, heat, and smoke that broke the
46 glass vessel and set off the overhead sprinklers. The school didn't find anything in their

1 investigation, and I was questioned since the reaction happened with solutions I had prepared. I
2 cooperated fully, but I did suggest they search Grady given his clear path of vengeance against
3 Julien. Nothing was in Grady's locker linking them to the solution switch, but the search didn't
4 start until the next day. Grady was a super smart kid. There's no way he would leave evidence in
5 his locker overnight that would tie him to a prank that could have killed multiple people. But I
6 had seen enough. Something needed to be done to stop Grady's antics against Julien.

7
8 On September 18, the Discipline Board convened to discuss Grady's actions in the lab explosion,
9 confetti bomb, desk tampering, and potential punishment. This was on my recommendation to the
10 Board, which was fully supported by the principal. We interviewed Grady – with Charlie present
11 at the hearing – and allowed Grady to respond to the allegations. The entire hearing was recorded
12 and transcribed; you can see a transcript, if you're curious, in Exhibit 3. Grady tried to deny
13 everything and demanded we provide evidence. Honestly, we didn't have anything conclusive,
14 but it wasn't a courtroom, so we didn't have some legal standard to abide by. We did ask Grady
15 detailed questions about all three incidents to get his answers on the record – and to make sure
16 Charlie, who was there, knew about Grady's crazy behavior. After the hearing, the Board
17 unanimously agreed to suspend Grady for one week from school – one of the harshest penalties
18 we have short of expulsion. Grady threatened us after we announced our decision, telling us that
19 false witnesses "always get their due." I wish we had been able to look at Grady's phone, but we
20 don't have the ability to seize a student's phone – and no student ever gives it up when asked.

21
22 After Grady returned from his one-week suspension on September 26, and pretty much through
23 the fall semester, I was astonished by his good behavior. Grady had been allowed to continue
24 practicing on the swim team when he returned from suspension – as long as there wasn't a single
25 antic – but he couldn't compete in any races or meets unless the school allowed it. As we
26 approached Thanksgiving break, Grady's classroom behavior and attitude at swim practice was
27 consistently angelic – he was quieter, more focused academically, and fully receptive to correction
28 and direction at swim practice. I even saw him listen intently to Julien at practice as Julien
29 criticized some of his technique while calling him "Goldy," like a goldfish. And then saw Grady
30 implement whatever Julien said with faster times on his next set of laps. I don't recall any other
31 specific interactions between those two – which is why the senior-coaching-freshman moment at
32 practice was so memorable to me. Grady and Julien didn't really interact during my class after the
33 suspension other than me hearing Julien call Grady "Goldy" several times. But Grady never
34 reacted so I didn't do anything about it. Now I know Grady was lulling every single one of us into
35 complacency – the perfect setting for his horrid crime.

36
37 Because of this sustained improvement, the school allowed Grady to compete in the State
38 Championships. I thought he had earned a second chance; I was so wrong. The State
39 Championships were held at THS because of our Olympic-size swimming pool, and that year's
40 competition happened on November 22. The JV races go first, then the Varsity ones since those
41 are the most competitive and favored by the crowd. I was there the whole time since I coached
42 both teams. Grady competed in two races – won them both – and was finished by about noon.
43 There were still a couple more JV races to go after that, followed promptly by the first Varsity
44 race, and I remember talking to Grady because I – ugh – told him how proud I was of him lately;
45 Grady just smiled and said "thanks" before heading toward the locker rooms. I still can't believe
46 that was moments before Grady murdered Julien. I haven't seen Grady since that last eerie

1 conversation. Julien had three races himself that day, including the very first Varsity one, the 200-
2 meter freestyle. He finished fourth, and I thought he looked sluggish on the final lap – his speed
3 fading more than I’ve ever seen in four years. So, I went up to him after the race to ask if he was
4 feeling alright. Julien brushed me off, said he was fine, and headed back to the locker room. It
5 was minutes later that I heard someone yell 9-1-1.

7 I sprinted into the locker room and found Julien on the floor with his muscles jerking around like
8 they were all spasming. He didn’t respond to me calling out his name, and there was a pulse,
9 heartbeat, and breathing – just all erratic and racing. An ambulance and police arrived incredibly
10 fast, maybe a minute after I found Julien, and they raced him to the hospital. I showed one of the
11 cops where Julien’s locker was and made sure one of the other coaches was contacting Julien’s
12 parents and knew which hospital the ambulance was headed to. Then, I talked to the rest of the
13 Varsity team and a couple of the JV swimmers who were still there. I told them not to worry, even
14 though I’m sure I looked incredibly worried myself. We eventually called off the rest of the swim
15 meet. That took a while but was a decision all the other coaches agreed with. I went to the hospital
16 to visit Julien later that evening, but I was not allowed to see him because he was still in really bad
17 shape. I learned the next morning he had passed away. I was heartbroken. I offered to do anything
18 I could to help with the funeral and things, but I never got around to that because the next week
19 was like a whirlwind nightmare.

21 The day after Julien died, I was interviewed by a police officer named Detective Reyne who asked
22 me a bunch of questions about whether anyone held a grudge against Julien. I immediately said
23 Grady. The cops must have already been onto him because the Detective nodded as soon as I
24 mentioned Grady’s name. I talked about the interactions between Grady and Julien, and what I
25 remembered from the day of the swim meet. I learned a day or two later that Julien had been
26 poisoned! At some point I learned it was Clartaxin. I had heard of that toxin before but it’s not
27 something that I’ve studied, and I certainly have never taught anything about it or how to make it.
28 Grady was a sharp kid and very gifted in chemistry, so I am 100% confident Grady had the
29 knowledge and skill to make that stuff – even though I admittedly don’t exactly know how to make
30 it. Just goes to show how premeditated Grady’s murder was on Julien. I tried to look up as much
31 information about Clartaxin as I could, just in case I had seen something that might help the cops
32 convict Grady, but I found it extremely difficult to find anything online or in textbooks about it.
33 Even my chemistry books from my college studies didn’t have much of anything about it.

35 Further affiant sayeth naught.

Chandler Flynn

FACT STATEMENT OF LOGAN COBB, M.D.

Greetings! I am Logan Cobb, the chief medical examiner for the City of Texoma for the last eight years. I am also an expert in forensic pathology and forensic toxicology. I'm 56 years old and happily married. We have three wonderful children. They're all grown up now, so we're enjoying our new status as empty nesters with our two pet corgis that we adopted last year. Outside of work, I enjoy fishing and golf. I can never get lucky with the former and am no good at the latter, but maybe one day. I graduated from Harvard University in 1995 with a double major in biology and chemistry. I originally thought I'd work at a big pharmaceutical company as a chemist, but my mother's dying wish was that I go to medical school. I graduated from Johns Hopkins four years later, earning my M.D., then spent my residency in pathology. After that, I worked for two years at the Mayo Clinic where I specialized in medical and forensic toxicology on top of forensic pathology. For those who are unfamiliar, a forensic pathologist is a medical doctor who specializes in and investigates sudden, unexpected, suspicious, or violent deaths. By nuanced contrast, a forensic toxicologist is a medical doctor specializing in identifying and quantifying drugs, poisons, intoxicants, and toxins in a person or biological sample.

The Mayo Clinic was where I got my big break. A friend of mine at the Texoma Bureau of Investigation (TBI) asked me to consult on a cold case – an unsolved poisoning of a famous Texoma actress, Delilah James. She was the first woman from Texoma to win an Oscar for Best Actress. During the initial investigation of the murder, the police collected samples from Ms. James's blood because they believed a rare poison had been used to kill her. But they got zero leads for nearly two decades. I was able to test the blood using a new method; I found trace levels of bacteria in the blood that originate only from a specific type of soil found in the mountains of South America. And guess who had just come back from a hiking trip in Machu Picchu days before the murder – none other than Ms. James's nanny. Turns out, Ms. James had fired the nanny the day she died, clearly motive for murder.

After I testified at the trial, the case got major international attention in the field of toxicology, which got me published everywhere. My career took off. I consulted for all the major three-letter agencies: TBI, FBI, DEA, you name it. But after all the whirlwind travel and publicity, I decided to stop consulting and settle down in Texoma to spend more time with my family and kids. I was offered the chief medical examiner job and accepted on the spot. In the eight years since, I have performed hundreds of autopsies and regularly consult with local law enforcement agencies, including the Texoma Police Department (TPD), when they have complicated cases that require my toxicological expertise.

I personally performed the autopsy of Julien Younger, the victim, and authored the autopsy report, which is Exhibit 4. I was on vacation when I received a call from the President of the Texoma State High School Sports Association on November 23, 2025. She was clearly distraught and told me that a student had died after the Texoma State High School Swimming championships. From what I learned, the student was rushed to the hospital after he had collapsed in the locker room – and despite heroic efforts by the medical staff, they were unable to save him. I flew back home a few hours after that call and took charge of the autopsy. I didn't have to do that – a colleague would have covered me while I was on vacation – but I just felt led to do it.

1 The autopsy took place the morning of November 24. Younger was a well-developed male, 18
2 years old, with an athletic build. The body was cool to the touch and rigor mortis had fully
3 developed. The extremities and major body parts were symmetrical and unremarkable. In fact, the
4 entire external examination of Younger's body was unremarkable – but things got interesting when
5 I started the internal examination. Younger's throat and nasal cavities showed signs of extensive
6 lesions with traces of vomit still in the throat. I opened the body with a "Y" shaped incision and
7 immediately noticed two things: the distinct smell of rotten eggs, and extensive internal bleeding
8 that occurred post-mortem. Younger's heart showed definite signs of stenosis in the mid left
9 anterior descending coronary artery and mid right coronary artery. Stenosis is the abnormal
10 narrowing of a body passage, usually through age-related calcium buildup or congenital defects.
11 I saw no congenital defects in Younger's heart and learned there was no family history of heart
12 disease. There was evidence of extensive ulceration and perforations in Younger's esophagus and
13 stomach, the left lung contained a substantial amount of fluid, and numerous organs showed signs
14 of hypoxia, or a lack of oxygen. Based on the totality of the internal damage to Younger's body, I
15 ordered toxicological testing of Younger's blood and tissues since I suspected a toxin had
16 contributed to the death. The results of that testing confirmed my suspicions – high levels of
17 Clartaxin in Younger's blood, one of the most lethal synthetic poisons on the planet. We're talking
18 small-dose-causes-death level toxicity. I determined the manner of death to be homicide with
19 poisoning as the cause of death.

20
21 As for how Clartaxin affects a person, the toxin essentially attacks the body in two ways
22 simultaneously. First, Clartaxin stops the nervous system's ability to communicate with other
23 organs. Normally, when your brain wants a muscle to move, it sends a chemical messenger to the
24 muscle cell; to stop the movement, an enzyme destroys the chemical messenger to allow the muscle
25 to relax. A poison like Clartaxin binds to that enzyme and destroys it, which prevents the enzyme
26 from destroying the chemical messenger. Nerves continuously fire, forcing organs and muscles
27 into a state of endless, uncontrollable overstimulation. The second attack comes from Clartaxin
28 binding to cell surfaces and destroying the ribosomes in the cells that build proteins. These cells
29 quickly die and eventually cause organ failure through acute cellular hypoxia. All of this can occur
30 in approximately 12 to 24 hours after initial exposure.

31
32 The nature of Clartaxin was fully consistent with my observations during Younger's autopsy as
33 well as the reports from first responders, who reported Younger to be spasming with erratic and
34 racing heartbeat and pulse. Notably, there was a relatively high level of internal damage to the
35 victim's head and neck area. This led me to suspect the poison had entered the body somewhere
36 in the head or neck area as the first exposure. I examined the items taken from the victim's locker
37 and was immediately drawn to the black swim goggles. I took swabs of the squishy plastic part
38 on the inside of the goggles that form the seal around the eyes, and I confirmed traces of Clartaxin
39 there. You can see that in clear detail in Exhibit 5, which I took during the testing process. There
40 was no question that was the poison used to kill Younger.

41
42 After I finalized my autopsy report, I spoke at length with Detective Reyne regarding how a killer
43 would make Clartaxin since it's not a naturally occurring toxin. Anyone could theoretically create
44 Clartaxin if they had the right materials, equipment, and a sufficient level of chemistry knowledge.
45 While there is some public information about Clartaxin and its effects, the recipe or formula for
46 how to make it is not something you could just find on the internet or in a book. This is, of course,

1 because of the poison's lethality. There are all kinds of things you can find on the dark side of the
2 internet if you know where to look or who to message, although it's my understanding that the
3 police and feds are constantly monitoring people's activity on the dark web to prevent them from
4 getting their hands on a poison that could be used as a biological weapon. While I am one of the
5 few people who know how to create Clartaxin, I know there are things out there on the dark web
6 and other sketchy places where you can find information like how to make Clartaxin sadly.

7
8 I explained to Detective Reyne what "ingredients" would be needed to make Clartaxin through a
9 chemical extraction process. In short, to make Clartaxin, you need to extract chemicals found in
10 three household items: herbicide, deodorant, and detergent. The problem is you need to apply three
11 vastly different extraction methods to get specific compounds from each item in order to mix them
12 to create Clartaxin. And while you can find the necessary chemicals in common detergents and
13 deodorants, Texoma has banned the specific type of herbicide that you would need; it's only
14 available in France now. The extraction process would take several hours because you'd have to
15 do them one at a time; but once done, you have to mix them together within about twelve hours or
16 the process will not work – it will not produce Clartaxin or anything lethal at all.

17
18 Assuming someone had successfully extracted the chemicals from all three "ingredient" sources,
19 they would still have to combine those chemicals relatively quickly. The mixing process gives off
20 a strong sulfuric aroma, just like the smell of rotten eggs, at multiple points during the process.
21 Sulfur is an extremely recognizable smell, and the aroma created during the mixing process has
22 dense molecular clusters, which means the smell dissipates very slowly. This mixing process is
23 also extremely dangerous because any skin exposure to the Clartaxin would be almost certain
24 death. Protective gear would be essential. While the fumes given off during the mixing process
25 are not as dangerous as direct skin contact, breathing the fumes for any prolonged period would
26 cause significant respiratory problems unless the experiment was in a large or well-ventilated
27 space. Once the three chemicals have been combined, the result is a liquid that must be slowly
28 evaporated using specific equipment, which leaves behind a white paste – Clartaxin.

29
30 I identified the brands of herbicide, deodorant, and detergent that contain the necessary chemicals
31 to make the toxin. I also explained the equipment and other materials someone would need in the
32 process. You'd need much more than some basic laboratory equipment, and the process would
33 require an immense amount of electricity or power during the extraction, mixing, and curing
34 process (the last step to get the toxin into the white paste). While it is possible for someone to
35 have done this in their home, I cautioned Detective Reyne that the toxin was very likely created in
36 a lab or facility of some kind. The next day, Detective Reyne came back with more things for me
37 to review after executing a search warrant. One was a sample of residue found near a makeshift
38 chemistry lab in the basement of the home, which tested positive for Clartaxin, but it was only
39 trace amounts. I examined the other evidence and noted there was detergent and deodorant that
40 could have been used to create the toxin, although both of those brands are found in nearly every
41 store in Texoma. While the police did not find any of the banned herbicides, I reviewed pictures
42 of the basement laboratory in Exhibit 6. The lab equipment in the basement was a fairly serious
43 small-scale chemistry workbench, not just a few pieces of basic glassware. All of the things you
44 can see in that picture are used for heating, stirring, distilling (or refluxing), separating, and
45 measuring liquids. You can see glass distillation / reflux apparatus, condensers, retort/ring stands
46 with rods and clamps, a magnetic stirrer, large round-bottom flask, and reagent (or storage) bottles.

1 I confirmed to the Detective that the equipment in that picture was precisely what could be used
2 to make Clartaxin, although none of the equipment you see in Exhibit 6 is illegal or unlawful to
3 own, to be clear.

4
5 At the time, I understood Detective Reyne and the police were looking for a teenage boy who lived
6 at the home with the basement laboratory, but I didn't follow any of that process since I'm just the
7 medical examiner. But sometime after Thanksgiving I was asked if I would be able to create
8 Clartaxin using the equipment like they had in the basement laboratory. I confirmed that I could
9 but it would be much safer to do that in an official, secure lab like the one at my office. But I was
10 told that the purpose of doing the experiment inside the home was to confirm its feasibility and
11 determine how noticeable it would've been for anyone in or around the home. I was also given a
12 copy of an E-Mazon order log in Exhibit 9 and asked if anything listed there could be used in the
13 process to create Clartaxin. Some certainly could – like the deodorant, detergent, beakers, reagent
14 bottles, rubbing alcohol, coffee filters, kaolin clay, potassium carbonate, sodium hydroxide,
15 potassium bicarbonate, and diatomaceous earth.

16
17 I agreed to do the experiment and the district attorney worked with the DEA to obtain one of the
18 banned herbicides from France for this experiment. Yes, the same one in Exhibit 7 by number 9.
19 I also used the exact same type of equipment, deodorant, and detergent the police found in the
20 home and various items listed in the E-Mazon order in Exhibit 9. I got started in the basement of
21 the Quartz home on December 3 at 10 a.m. That house is the one on the left side of Exhibit 1.
22 And the basement in that house looked exactly like what you see in Exhibit 6 – except all of the
23 equipment had been taken by the police at that point. I know because I tested all of it. Shockingly,
24 there was no trace of Clartaxin in any of the equipment anywhere. Just that one residue spot.

25
26 The first step in the overall process was to extract the necessary chemicals from the three raw
27 ingredients. I began with the French herbicide obtained by the DEA. There's a specific compound
28 called Quantaprat, which is a highly toxic, fast-acting, and non-selective chemical that is in
29 herbicide use for controlling weeds. To separate the Quantaprat from the herbicide, you need to
30 use a process called adsorption. That is the adhesion of atoms, ions, or molecules from a gas,
31 liquid, or dissolved solid to the outer or inner surface of a material, forming a thin film. Quantaprat
32 is a positive ion in solution, which makes it strongly attracted to negatively charged surfaces, like
33 clay materials. Using a separatory funnel, you can mix the herbicide and an aqueous solution
34 containing clay particles. You can create that by mixing water with kaolin clay, which is sold in
35 powdered form, and the Quantaprat ions will bind to the clay solution. After that, it's just a
36 question of draining the solution and applying heat to evaporate the liquids. The Quantaprat ions
37 will have created a thin layer around the clay which if carefully removed will leave just the
38 Quantaprat. This is the exact process I followed, and it took three hours and six minutes.

39
40 Next was the deodorant. Nearly every commercial deodorant contains synthetic, antimicrobial
41 chemicals to kill germs. Extraction of these is extremely simple. Scrape the deodorant into a glass
42 container and add rubbing alcohol. The alcohol will dissolve the waxy bases to the deodorant and
43 the added organic fragrances. Gently heat the mixture in a hot water bath to melt everything down
44 without boiling off the solvents but remember to stir thoroughly. This is the hardest part and
45 requires the most patience and focus. Then, using another glass container, pour the warm mixture

1 through a coffee filter capturing the solids and leaving the liquid. After that, like the herbicide, just
2 apply a lot of heat to evaporate the water away. This step took me an hour and a half to finish.
3

4 The final part of the extraction process for me was the detergent – but you could have done the
5 process in any order among the three ingredients. However, as I noted before, you have to mix
6 them relatively quickly once you have finished the three extractions, within 12 hours. So, someone
7 wouldn't need to do the three extractions and mixing process one right after the other, but they
8 also couldn't do it over three or four days, if that makes sense. As for my third extraction step,
9 household chemical detergents contain certain human carcinogens that are synthetic, colorless
10 liquids. These carcinogens mix with water, so traditional separation techniques like I employed
11 before would be useless. Instead, I used a really strong, highly soluble salt made from potassium
12 carbonate and sodium hydroxide, two items on the E-Mazon log. Adding that mixture dramatically
13 increased the ionic strength in the detergent, which strips water molecules away to hydrate the ions
14 forcing the carcinogens into their own distinct organic layer. The last step is, you guessed it, heat
15 – with evaporation leaving the carcinogens in a solid, powder form. The third part in the extraction
16 process was complete just before 4:00 p.m.
17

18 I took a ten-minute break to get some fresh air and chat with the cops who were guarding the house
19 outside, for their own protection. Then I began the mixture process. I did allow Detective Reyne
20 in the basement at this time because they needed to know the intensity of the sulfur aromas – they
21 were also a little annoyed they had not smelled any yet. Once combined, it would take about
22 twelve hours under constant heat and occasional mixing to combine and cure. As soon as I
23 combined the three extracted chemicals, there was instantly a rotten egg smell. I opened the
24 window above the table where I was creating the toxin at Reyne's suggestion, which you can see
25 in Exhibit 8, and that greatly helped ventilate the basement and reduce the smell. I worked until 4
26 a.m., and the smell still was very pungent over those twelve hours. I only needed to check on and
27 mix the solution about every couple of hours once the mixing process started; I did not have to
28 stand there the whole time watching.
29

30 I then took a catnap in my car, waking at 6:30 a.m. sharp, just habit. I didn't smell any sulfur
31 aromas when I went back into the basement. I mixed several times over the next twelve hours
32 with continuous low heat, checking on it about every three hours, and the smell returned about
33 noon that day. Worse than before, like rotten eggs died inside of more rotten eggs. I threw up at
34 one point, and I haven't done that since medical school. It was that bad. The mixture had fully
35 cured into a white paste by 9 p.m. that evening and the smell was gone. We took the toxin I created
36 back to the ME office and tested it to confirm – Clartaxin. How anyone missed the smells
37 associated with that process is unbelievable.
38

39 Further affiant sayeth naught.

44 day of December, 2025.
45

ADDENDUM TO STATEMENT OF LOGAN COBB, M.D.

With additional study since my original statement, I have some more information to confirm. Making Clartaxin the way I did in the experiment, which was consistent with all of the equipment and supplies found in the basement, so it has to be how Grady did it – even though we cannot be certain – would have produced a toxin with full lethality for about two weeks. At that point, it would start to degrade to the point where it was essentially harmless after the fourth week. Based on half-life analysis on the Clartaxin found in Younger’s body, the residue obtained from the Quartz basement, and the toxin I created during the experiment, I am medically certain that the toxin used to kill Younger was created – meaning finally cured; ready to go – nine to fourteen days before Younger’s first exposure to it. I am certain of that range, but there is no test I’m aware of that could get any more precise than that.

As you may have heard, one of Charlie Quartz's neighbors, Maurice Whitacre, was found dead by police. He'd been dead for several weeks, and the police only found him because the guy's family asked for a welfare check. He was a hermit but still always came for family Christmas dinner. I was called to the scene after some officers noticed a weird smell and knocked down the front door. That house is the one on the right side of Exhibit 1, next door to the Quartz property. The body was in late stages of decomposition, but it was clear Whitacre had a heart attack, had fallen, and been there for many weeks. I saw no signs of foul play on the body, and the police found no signs of forced entry (other than their own). Whitacre's family urged me not to do an autopsy. I had the final decision under the law on whether to do an autopsy, but I saw nothing at the scene or on the body that gave me any suspicion the death was anything other than natural causes – with a really late discovery. It was also Christmas Day. I released the body to the family and understand they had their father cremated. The only thing that I remember from that case was finding a silver laser pointer in Mr. Whitacre's pockets when we examined the body on scene. We also found a box full of the same banned French herbicide as the police found in Grady's secret cubby hole. Yes, the same one you see in Exhibit 7. Maybe Whitacre used it for his corn crops.

This concludes my sworn testimony.

Logan Cobb, M.D.

LOGAN COBB, M.D.

SIGNED AND SWORN TO BEFORE ME the undersigned authority at 8:00 a.m. on this
the day of trial.

FACT STATEMENT OF CHARLIE QUARTZ

Hello friends and neighbors, my name is Charlie Quartz. Grady is my son and only child, a wonderful boy who was targeted by law enforcement and school bullies. I know the State says he murdered Julien Younger by poisoning him. I know they say they have a bunch of evidence proving that. I know it's maybe definitely true, but I struggle to comprehend it. He was my son; if he murdered Julien, he needs counseling, not prison. I am also the defendant in this case. That makes me targeted too – a ridiculous overreach only because the State cannot find Grady or Morgan Snyder, my former spouse. I have absolutely no idea where they are. I am worried sick about them. It's been almost a month since they were last seen or heard from. I believe they are alive, but every day lets another sliver of doubt in.

I am 37 years old. I live in a modest house in Central Texoma off FM 147, a straight shot to the Texoma Farmer's Market. My property is about one acre. I'm an organic farmer. I just love the land, y'all. I grow all types of vegetables and herbs in my garden and greenhouse behind my house. My farm provides most of the food Grady and I need at home. I sell everything else at the farmer's market every Saturday from 7 a.m. to noon. I also trade for things I don't have or grow. Things like eggs, coffee, juices, and cuts of beef. Grady helps me sell at the market even though he calls me the "crunchy farmer." Those markets are the only time I leave my property, to be honest. If we need anything else at home – toilet paper, detergent, gardening tools, or organic treatments I use in my garden – I order those online with E-Mazon for home delivery. I am certainly not wealthy, but I make more than enough to provide a loving home. Exhibit 1 is an accurate depiction of my property and the one next to mine owned by Maurice Whitacre – but we will talk about that curmudgeon. I've lived in that house since Grady was born. It's a one story, with a decent-sized basement, so I guess that makes it technically two stories.

I graduated from UCLA in 2010 with a degree in horticulture and have been a self-employed organic farmer ever since. I'm a single parent and have been since Morgan and I mutually agreed to divorce in early 2013. Morgan agreed to give me sole custody over Grady; Morgan works for Paris Air, an international airline based in France – frankly, the name sounds like your backside when you say it all French like. Morgan worked there since we got married and moved to France a few months before our divorce was finalized. Morgan and Grady chat every now and then by phone or video chat, but I am basically Grady's only parent. Grady was born in January 2011, about a year after I graduated college. He was the sweetest baby boy in the entire world. He hardly ever cried when he was a newborn. It was clear that he was extremely intelligent. Grady was a gifted swimmer from his very first swim lesson at three years old; that boy could seriously swim like a fish. It was extraordinary to watch him move in the water. Grady later had some problems that every parent of a teenage boy has – some impulsivity, some yelling, and some mischief – but absolutely normal for a growing boy. In fact, not a single real problem until the police showed up one day to hassle him based on a bunch of nonsense from that crusty old neighbor, Whitacre, who farms corn next door.

For whatever reason, Whitacre just had it out for my boy, Grady. It all started with Whitacre pounded on my door one day in March saying Grady had shot down their drone with a shotgun. The accusation was silly. We didn't own any guns and I hadn't heard any gunshots. We had no need for guns. The only pests we had were a few rabbits that I easily kept out of the garden with

1 chicken wire. Plus, I had been outside working the garden all day; I heard no gunshots. I asked
2 Whitacre why he thought Grady had done it. Whitacre just said, "I know it's him." I told the old
3 man to leave and later asked Grady about it. He said he had no idea what I was talking about. And
4 Grady then seemed to get really upset and rattled about "the false accusation," as Grady called it.
5 He told me a few times "that geezer will be sorry," but I talked Grady down. He eventually said,
6 "I know, revenge is risky," and I believed he had moved on after just a little teenage boy emotions.
7 I told Morgan about the accusation and Grady's reaction to it, of course. Morgan pleaded with me
8 to put Grady in therapy. I thought that was a huge overreaction. But Grady sure could get obsessed
9 about things and act out. I just didn't find that to be atypical for a teenage boy. Morgan really
10 wanted us to give therapy a try, putting lots of pressure on me to give it a chance, but I did not
11 agree. And since I had sole custody, I had the final say.

12
13 So now we're in late May of this year. Summer had just started with Grady starting his freshman
14 year in the fall. This police car shows up at our house. Detective Dana Reyne introduced
15 themselves to me and said they had a report that Grady had vandalized an e-Bike. I told the cop I
16 had never seen an e-Bike in our neighborhood, and I asked who had called in the complaint. The
17 Detective told me it was Whitacre. After a big eyeroll, I agreed to let Detective Reyne speak to
18 Grady in my presence. Grady denied vandalizing or even touching Whitacre's e-Bike but said
19 they were aware where Whitacre charged it, by the shed on the far east side of Whitacre's property.
20 I had no idea how Grady knew that. That made me a little suspicious, but I did not think he had
21 done anything like what the cop was accusing. I told the Detective I would speak to Grady and
22 deal with him if I found out he'd done it. The cop told me to look out for lockpicking tools and a
23 wrench Whitacre said was also stolen and then left. No, I didn't punish Grady for the alleged bike
24 thing because I never found any evidence he did it. And certainly no lockpicking tools or whatever.
25 I also checked my own tools – my wrench was right there, untouched.

26
27 But the same cop comes back like a week or two later with a second accusation from Whitacre.
28 This time, Reyne says Grady threw a balloon of purple paint on Whitacre's car in the middle of
29 the night. It was silly, especially that day. The night before, Grady had gone to bed at 8:00 p.m.
30 I stayed up watching TV in the living room. Sometimes, I get really bad bouts of insomnia. It
31 happened that night. I was up until sunrise and never heard Grady even move, let alone leave the
32 house. I told the Detective all of this, but Reyne didn't care and asked to search the house. Things
33 were getting ridiculous at this point. I was not going to let some cop rummage through my house
34 based on two false accusations by a demented neighbor with a grudge. So, I refused.

35
36 The cop asked if we had any purple paint and balloons. I said that we did – purple and a bunch of
37 other colors from redecorating the living room. The balloons I bought for Grady's birthday way
38 back in January. The cop asked to see the balloons, so I yelled inside to Grady to find his birthday
39 balloons. Grady came to the door half asleep with the balloon bag and told the cop they were the
40 most common balloons in the state. The cop tried to scold both me and Grady on their way out
41 the door, too. But there wasn't a shred of evidence that Grady had anything to do with that. Reyne
42 also told me someone will have to watch Grady at all times. I laughed. The only time he wasn't
43 at home with me during the summer was when he walked to the Texoma pool to swim, which he
44 did almost every day. Grady would be gone for about two and a half hours max.

1 Even though I didn't believe Grady had anything to do with either of those two things, I started
2 keeping a closer eye on him. But I saw nothing worrisome. Yet for the third time, Detective
3 Reyne was back at our house after sunset on June 17. Grady and I were both outside sitting by the
4 fireplace near my garden when Grady said, "The cop is back." We both got up and headed for the
5 front of the house; Grady ran there but I was only seconds behind him. Good ol' Detective Reyne
6 accused Grady of shooting a laser beam at the planes landing at the nearby airfield. I saw no lasers.
7 We had both been outside for the last hour or two, ever since sunset. I'd never seen a laser pointer
8 in our house or with Grady. But it seemed like something a boy his age might do – and not
9 appreciate the danger. Detective Reyne again asked to search the house. Again I refused. I did
10 say pretty sternly that I was tired of them harassing me and my son – and if they wanted to come
11 back, they would need a warrant. Reyne told me my "bad parenting" would land me in jail
12 someday, which was just completely unprofessional for a law enforcement officer. They also told
13 me to triple-check my E-Mazon account to see if I saw anything I hadn't ordered.

14
15 Two days later, while I was cleaning up the house, I found a small silver laser pointer on the floor
16 in Grady's room near a very small spot of purple or black paint. I confronted Grady immediately.
17 He said he borrowed the laser from a friend the day before. A kid one year older than Grady,
18 Kennedy Dixon, had come to our house a few times that summer after the kids met at one of the
19 farmer's markets. And Kennedy had been there the day before on June 18 for several hours playing
20 with Grady outside and in the basement. Grady swore, over and over, that he did not have the
21 laser pointer when the cop came by. He repeatedly denied ever pointing any laser at an airplane.
22 I wanted to believe Grady, but I was having serious doubts if I could trust what he was telling me.
23 Of course, I took the laser away and threw it away. I grounded Grady for the rest of the summer,
24 took away his phone and laptop, and began researching child psychologists in the area. A friend
25 of mine had sent her son to one, and I set an appointment with Dr. Enyo Ehd for the next day.
26 They had the highest reviews by far of any local shrink, so it was an easy choice. I called Morgan
27 about it, and they readily agreed to it, probably because they had suggested therapy in the first
28 place. Morgan offered to pay for half of the therapy costs, too, which I appreciated.

29
30 I attended the first ten minutes of the first session between Dr. Ehd and Grady on June 20. Then I
31 went back to the waiting room. At the end, I spoke privately with Dr. Ehd who recommended
32 weekly sessions with Grady for an indefinite period of time. Each hour-long session cost \$300,
33 which was significant compared to my income, but we agreed to start with bi-weekly sessions and
34 reassess at a later date. There were five sessions that summer before Grady was set to start high
35 school, and Dr. Ehd had zero concerns at that point with Grady or his behavior. I was thrilled with
36 the results at that point, and I started allowing Grady to use his phone and laptop for just a few
37 hours each night. He was still allowed to walk to the Texoma pool to practice after that first
38 session; I couldn't get in the way of his practices.

39
40 Grady started high school on August 18. He desperately wanted to make the Varsity swim team
41 and trained super hard all summer, daily. Try-outs were on August 29, which was the same day
42 as our next scheduled therapy session, so I rescheduled that to September 5. There was no way I
43 was going to have Grady miss those try-outs. I asked Grady how it went when they got home from
44 school that day. Grady was unusually quiet and didn't want to talk about it. Except muttering the
45 name "Julien." Grady was upset, and I didn't want to push things over the long Labor Day
46 weekend. I just hoped things would be OK when the teams were posted.

1 Well, that Tuesday did not go well. Grady learned he was on the JV team. I guess Grady
2 complained to the coach about that Julien kid sabotaging his try-outs. But the coach just ignored
3 him. Looking back, that was definitely a moment when things seemed to change for Grady. He
4 seemed to bring up Julien and Coach Flynn at home all the time after that, including this weird bit
5 about how only Julien was allowed to wear black swim goggles because he was the “Bandit.”
6 Grady had always worn black swim goggles, not for any specific reason, but still, it seemed wrong
7 that Julien kid got to just claim a color. I encouraged Grady to discuss and vent all of that with
8 Dr. Ehd, and I ordered new blue goggles for Grady. Grady was no longer grounded once school
9 started, and I allowed him to have friends over too, but it seemed the only friend who ever came
10 by was Kennedy. I was happy to hear from Grady that he was assigned lab partners with Kennedy
11 in his AP Chemistry class. Grady was nuts about science, and I didn’t want him paired with some
12 mean student that might dampen his academic interests.

13
14 It was a couple days after Grady was put on the JV swim team. He and Kennedy walked home
15 together after school, which they did every day by that point. Kennedy would pass our house on
16 the way to theirs in the fancy Park Lane development to the south. The kids were going to study
17 and do some homework. Grady went into his room to change, and I decided to chat with Kennedy
18 while we waited. I liked Kennedy. I was really happy that Grady seemed to have found a good
19 friend. I asked Kennedy how school and things were going. Kennedy gave some short answers
20 like every kid these days. I asked how Grady was doing with all the swim team stuff, and Kennedy
21 said “fine, but that Julien is a jerk and really after Grady.” I wanted to ask more but Grady emerged
22 from his room, and the kids headed down into the basement to study. I meant to bring up the
23 comment to Dr. Ehd during the next session on September 5, but I forgot – then and when Dr. Ehd
24 called me the next day. In that call, Dr. Ehd told me to watch out for any strange things that Grady
25 might be doing at home. Stuff like hoarding tools he never uses, locking himself in his room for
26 hours, or looking at bad things online. I promised to do so even though I thought it was really odd.

27
28 Grady was still upset and a little angry with Julien and Coach Flynn that weekend. He talked about
29 them a fair amount, but not in an obsessive way. After school on September 8, I asked Grady
30 about his day. He said it had been good, talked a fair bit, but didn’t mention Julien once.
31 Afterwards, I was ordering something from E-Mazon on my phone when I saw an email from
32 Coach Flynn with the subject “Grady.” I opened the email and saw Coach Flynn claiming that
33 Grady had said they wanted revenge on Julien. Coach Flynn also believed Grady had messed with
34 Julien’s desk causing it to break apart when Julien sat in it. Coach Flynn said they searched
35 Grady’s backpack but didn’t find any evidence he had done anything to the desk. I marched into
36 Grady’s room and asked him point blank if he had tampered with Julien’s desk. Grady said “no.”
37 I asked if he had been planning some sort of revenge on Julien. He again said “no.” Both denials
38 sounded genuine. Look, I know when my kid is lying – most parents do – and he was telling the
39 truth. “Then why do they think it was you,” I asked Grady. “Because Julien said it was me, and
40 he’s the big boy on campus, so even Coach Flynn bends the knee,” he responded.

41
42 The accusation about the desk thing really got under Grady’s skin. He talked all about Julien the
43 next day after school as if my son had been four steps behind Julien the whole day: Julien did this,
44 said that, talked to him or her, had this face – stuff like that. I remember telling Grady to find
45 something else to talk or think about because he was becoming obsessed. That same week, I got
46 another email from Coach Flynn accusing Grady of setting off a confetti bomb in Julien’s locker.

1 I had never heard of such a thing. Those two emails are in Exhibit 2. Coach wanted to have a
2 parent-teacher meeting sometime the next week. I didn't ask Grady about the confetti bomb thing
3 because it was clear Coach Flynn had no evidence to back up that allegation either. I didn't want
4 to get Grady riled up again – I planned to certainly ask after speaking with Coach Flynn. But
5 instead of a parent-teacher discussion, there was a full-blown disciplinary hearing.
6

7 On September 15, there was an accident in Coach Flynn's chemistry class while the students were
8 doing lab experiments. The same class Grady, Kennedy, and Julien take with Coach Flynn. A
9 small explosion set off the school's sprinkler alarms. I remember that day because Grady and
10 Kennedy came home in the middle of the day. They told me what happened, but neither said or
11 made me think Grady had anything to do with that. Even though all the chemicals and solutions
12 are locked up tight at the school, and even though they are distributed specifically by Coach Flynn
13 prior to lab class, the school thought Grady had switched the solutions to hurt Julien. And the
14 school actually suspended Grady for a week! Grady made a passionate defense and protested their
15 innocence at this hasty discipline hearing I attended. Grady rightfully mocked Coach Flynn for
16 having no evidence to back up any claim. Honestly, I was proud of my son for standing up for
17 himself at the end. It seemed to me that they were truly out to get Grady. I took Grady home
18 immediately after they announced the stupid suspension. Neither of us spoke during the ride home.
19 You too can relive that worthless hearing by reading the transcript in Exhibit 3. The school emailed
20 me a copy of it afterwards, and I did send it to Morgan and Dr. Ehd, but otherwise gave it no other
21 thought. I had been there. I never looked at his texts; that would have been a big invasion.
22

23 Grady went and sat in the living room the moment we got home. He watched TV but said nothing,
24 even when I told him that I believed he was innocent. I was clear that my feelings would change
25 if I found out he had been involved in any of those pranks. Grady just nodded. After an hour of
26 us silently watching TV, I told Grady he was going to help me outside in the garden. He went
27 outside with me and did everything I asked him to do, but he still said nothing. I figured he would
28 wear himself out of the silent treatment or Dr. Ehd could get through to him the next day. I guess
29 Grady refused to speak to them too because the doctor came out after only twenty minutes. Dr.
30 Ehd suggested we try again on Monday and graciously waived the fee for that day's session. I
31 agreed and later called Morgan about it. Morgan offered to pay for all of the future sessions, which
32 was very nice. I took them up on that. I then set daily sessions with Dr. Ehd that week since Grady
33 was suspended. I wanted to ensure Grady had worked through the false accusations and remained
34 focused on schoolwork. Just all-around good behavior, you know. Grady wasn't super talkative
35 that weekend, but he was extremely helpful – even asking to help more in the garden. He did an
36 inventory of some of the stuff I needed for the upcoming season, and I let him order that on E-
37 Mazon since we shared the same account. He spent hardly any time in his room; he was in my
38 sight the whole weekend other than when he slept in his room. Still had no electronics, either.
39

40 Dr. Ehd told me they wanted to put Grady on some medication to "calm him down" because they
41 thought Grady might be holding onto some rage inside, but I refused. I didn't want my kid acting
42 like some zombie on drugs that he didn't need. Dr. Ehd told me they strongly recommended a
43 low-dose medication but conceded that it was ultimately my decision. Once again, I refused. Dr.
44 Ehd also advised that I should monitor Grady's activity online, check their laptop, and such. I said
45 I could definitely do that. I knew his password, but I had not used it before – I wanted to respect
46 my son's privacy. I never did check it, but that was because he hardly used it after the suspension.

1 And it stayed at the house. The school forbids computers, laptops, or tablets. I saw it in his room
2 daily when I was cleaning the house.

3
4 Turns out that my decisions were correct – because I know my son. Grady was literally perfect
5 those next two months. He started helping me much more in the garden, offering to help anytime
6 I went out there and he was home, weekends included. His grades soared; there were no reported
7 incidents at school. Grady even told me that he had asked Julien for tips at swim practice on
8 several occasions in October; I thought it was such an amazing sign of maturity. I remember
9 dinner on October 4 because he was super animated about being nicer to Julien and trying to learn
10 from someone who was the senior captain. I reported this to Dr. Ehd. We were both stoked.

11
12 Grady even kept his cool on October 22 after Coach Flynn gave him a 93 on a lab assignment that
13 Kennedy got 100 on – they submitted the same lab report! I thought Coach was being vindictive
14 and retaliatory, but Grady was so mature. He even started to get along with Julien at swim
15 practices. He put some of Julien’s techniques into use and was even faster in the pool. Grady said
16 Coach Flynn had said so. I didn’t think my son could swim any faster than he already did. Even
17 though Julien kept calling Grady the nickname “Goldy” like a goldfish. We continued the sessions
18 with Dr. Ehd every other week after the suspension. Every report was great. He was an angel.
19 Grady continued to walk home with Kennedy every day after school. Kennedy would hang around
20 for a bit once a week while they did homework. I was just thrilled Grady had a consistent friend
21 with everything else going on. At the time, Grady was super focused on an experiment he wanted
22 to do for the school’s science fair. I agreed to order a few things that he needed, like an electrical
23 cord and some reagent bottles he needed. A beaker set, too.

24
25 Grady asked me one night in November if I thought the school might let him compete in the swim
26 championships later that month. As part of the suspension, the school said Grady could continue
27 practicing with the team – subject to good behavior – but he could not compete in the state swim
28 championships unless the school said so. I told Grady to definitely ask Coach Flynn. To me, there
29 was no way they could say no given Grady’s sterling behavior post-suspension, and I was so happy
30 for Grady when he told me that the school had said yes. Grady had finished his science fair
31 experiment around this time and was so excited to show it to Kennedy. They came over twice on
32 November 9 and 10 to hang out with Grady and play in his chemistry lab. They were having such
33 a good time and laughing so hard that I checked in on them a couple of times in the basement.
34 There was nothing illegal or dangerous going on at all.

35
36 The swim championships were on November 22. Grady had trained extremely hard for the
37 competition. He was going to swim in two races and wanted to win both. I remember seeing the
38 black and blue swim goggles in his bag as we were leaving the house, but I didn’t think of it. I
39 watched Grady swim and win both races by a mile! I was so proud of him. We left after his last
40 race. Grady said he was tired and ready to go. So, neither of us were at the school or the school
41 pool when whatever happened to Julien started to happen. But when I heard on the news that
42 Julien had died, I got very worried that people would blame Grady somehow for it. Everyone
43 seemed to think Grady was already out to get Julien. I called Morgan, who agreed that another
44 false accusation on Grady could really set him back after so much progress in therapy. Morgan
45 got on the very next flight from Paris to Texoma that left late on November 23 and landed early
46 the next morning. I helped Grady pack while Morgan was in the air. I remember Grady packing

1 their phone and laptop. We went to the airport early that morning and met Morgan after they
2 cleared customs. I hugged Grady tight and watched him go through security with Morgan. I
3 waited until their plane was in the air and then went back home. That was the last time I saw my
4 sweet son.

5
6 I followed the news about Julien's death but had no reason to believe Grady had anything to do
7 with that. But then Detective Reyne arrived at my house on November 25 just as I was about to
8 have dinner. They had a search warrant some judge had signed. Reyne badgered me about where
9 Grady was. I told the truth – he was in Europe with Morgan. Reyne was incensed and ordered the
10 other cops to tear my home apart. They searched my whole property too, even the greenhouse and
11 garden. A lot of my crops were ruined by them stomping everywhere. Reyne got all excited when
12 they saw Grady's lab equipment in the basement. Yes, that's it in Exhibit 6. The next day, Reyne
13 demanded that I come to the station for some questions, which I did because I had nothing to hide.
14 I answered every single question truthfully, but Reyne was clearly unhappy. They wanted me to
15 call Grady and Morgan to see where they were, and I did that, but both calls went straight to that
16 recorded message, "The number you have dialed is no longer in service." They wanted to know
17 the last time I spoke to Morgan, which I explained – late on November 24 telling me that they had
18 landed safely in Paris. Less than 30 seconds. They eventually let me go home, and I was starting
19 to get really worried about where Morgan and Grady were.

20
21 Detective Reyne and the cops were back the next day with a new search warrant. They had still
22 not found Grady or Morgan in Europe even though they had joined forces with a bunch of
23 European cops. Honestly, I was thrilled – the more people looking for them, the better. I was
24 distraught at that point and fearing the worst about Grady. The only thing I remember about that
25 second search was them finding a hidden compartment under the floor near Grady's closet. I had
26 never seen that before in the top picture of Exhibit 7. I wasn't sure if it had always been in the
27 house, or if Grady had somehow constructed it. The police showed me some of the stuff they
28 found in the hidden compartment – which you see in the bottom picture of the same exhibit. I had
29 not seen most of that either, other than the multi tool above number three and the camera and hard
30 drive. I bought those for Grady last year. The multi tool went missing a while back and I ordered
31 a new one. Detective Reyne then took me back to the police station for more questions. This time,
32 though, there were way more questions about Grady's experiments in the basement and whether I
33 smelled or heard anything out of the ordinary, which I said "not really." I remember three or four
34 times there was a rotten egg smell, but those never lasted very long – or maybe I just became nose-
35 blind to it. Grady had explained that smell was just sulfur, a by-product of some of the reactions
36 he was doing to practice chemistry. Grady had been doing a bunch of experiments to find
37 something amazing to do for the school's upcoming high school science fair. Detective Reyne
38 asked me the last time I smelled a rotten egg smell. I said it was maybe two weeks before the
39 swim championships. Detective Reyne was obsessed with that answer.

40
41 The cop also quizzed me about any other strange things that had recently happened. The only
42 thing I could think of was that we lost power right around the time of the bad rotten egg smell. We
43 seemed to be the only house that didn't have power because I could see the road lights and some
44 glimmering from Whitacre's house. But the power came on soon after, so I paid no mind. Our
45 power bill for the month of November was ridiculously high, like four times normal for that month
46 – and I track those numbers before they even send me the bill. Around November 10 or 11, I got

1 an email alert about significant energy increase. But I figured that was just Grady and Kennedy
2 going in and out of the house that weekend. Then Detective Reyne shoved this list of E-Mazon
3 orders in front of me, Exhibit 9. I reviewed it and noticed a few orders that I never made, the
4 confetti bomb two-pack and black laser pointer. Grady had the login and password for my account
5 on E-Mazon, and he used it from time to time with my permission, but I watched those orders like
6 a hawk – both on the app and when things were delivered. And I never saw anything that looked
7 out of the ordinary on my account or in any delivery.
8

9 Detective Reyne also grilled me about all the organic chemicals I use in my garden. The large
10 order I made on October 30. I explained each one of those. Potassium carbonate is used to adjust
11 the pH in the soil, which is different from potassium bicarbonate, which controls and prevents
12 fungal diseases. Sodium hydroxide is a strong chemical used for cleaning and sanitizing the
13 equipment I use in the garden. Horticulture oils kill mites, aphids, and various insect eggs. Iron
14 phosphate is bait for slugs and snails, which you never want in a garden. Diatomaceous earth is
15 all-around insect control, and corn gluten meal helps control weeds while also fertilizing the soil.
16 All completely organic and legal. Same for the Kaolin clay ordered earlier; that's sprayed on
17 plants to make them less attractive to insects. I told the cop to read a book once in a while.
18

19 I kept asking Detective Reyne for an update on Grady and Morgan, and whether the police had
20 located them, but no one would tell me anything about that. They wouldn't answer me and told
21 me to go home and stay there. Grady and Morgan were supposed to fly back to Texoma on
22 November 30 and land at Texoma Airport. Even though none of my calls had gone through to
23 either of their phones, I went to the airport with a prayer that I would see them come through the
24 doors into baggage claim. I stayed for six hours but never saw either of them. I did see several
25 cops though who looked like they were watching me. In early December, Detective Reyne was
26 back at my house again to harass me – this time, they made me leave my house for two days so
27 they could do some sort of experiment inside my home. I asked a hundred times what they were
28 doing, but Detective Reyne told me they didn't have to tell me. I had to stay in a motel for two
29 days at my own expense while calling every news organization in Europe I could get a hold of,
30 pleading desperately for them to help search for Grady and Morgan.
31

32 Something awful happened to me on December 8. Detective Reyne knocked on my door and
33 arrested me for having something to do with Julien's death. It was preposterous! I had to hire a
34 lawyer and was released on bond the next day pending this trial.
35

36 Further affiant sayeth naught.
37

This concludes my sworn testimony.

SIGNED AND SWORN TO BEFORE ME the undersigned authority at 8:00 a.m. on this
the day of trial.

FACT STATEMENT OF ENYO EHD, PH.D.

Greetings. My name is Dr. Enyo Ehd, pronounced like “Ed.” I’m a licensed clinical psychologist and therapist specializing in adolescent psychology and behavioral disorders. I have a Ph.D. in Clinical Psychology – on the Child and Adolescent Track – from Princeton University, which I obtained in 2000. My dissertation was titled “Rexfordism – the Sly Teenage Spirit” and examined a new disorder that I discovered during my Ph.D. studies. It was a real crowd-pleaser, and I’ll explain more about Rexfordism later in this statement. Prior to receiving my doctorate, I attended the University of Texoma, where I obtained a B.S. in human development and an M.S. in clinical psychology. I was selected for the prestigious postdoctoral fellowship at the Nantucket Center for Adolescent Behavioral Health, the premier institution for the study of adolescent disorders and family dynamics. I’ll wait while you make the joke I’ve heard a thousand times.

I opened my own practice in 2003. My specialty is the diagnosis and treatment (pharmaceutical and not) of adolescents struggling with myriad behavioral issues. Examples include Attention Deficit Hyperactivity Disorder (ADHD), Oppositional Defiant Disorder (ODD), and Disruptive Mood Dysregulation Disorder (DMDD). Teenagers are especially prone to behavioral difficulties given the confluence of internal factors (such as the changes that accompany puberty) and external factors (all the pressures the current society places on them). I have written two books, “Terrible, Troubled, Tortious Teens” and “Puberty or Psychopathy?” I have been asked to speak at numerous conferences and engagements as well, particularly about the diagnosis I discovered, Rexfordism. Some will ask about my family life, even though it’s not particularly relevant. I am single and have no children at this time, but I am young and have time. I’m currently 56 and live in North Texoma by the lake.

Even though I know it’s stipulated and agreed by the judge and all the lawyers, I want to be extremely clear just in case someone randomly picks up this statement one day without the context. As my favorite news show says, context is critical. Charlie Quartz has waived the doctor-patient, therapist-patient, and all other medical privileges on behalf of Grady Quartz, which means Charlie has authorized me under the law to speak about my discussions and therapy sessions with Grady, as well as my discussions with Charlie related to Grady’s treatment. My first session with Grady was on June 20, 2025. I met Charlie in person at the same time. I asked them to join me and Grady for the first ten minutes. I find this usually puts the teenager more at ease – either from the encouragement of their parent, or the fact that the parent is leaving the room soon. I see all types.

I had spoken to Charlie briefly over the phone the day before to set the appointment and get some general background information. From that initial call, I understood that Grady had been involved in several incidents that brought the police to their home – and that Charlie doubted Grady’s denials in all three incidents. I explained the general structure of the sessions, that what we talked about was confidential, for him to be open about his feelings and actions, so that I could help diagnose and recommend certain treatments. A patient’s history and recent feelings are incredibly important in those early sessions. Charlie left after these introductory remarks.

I took notes during every session with Grady just like I do with every patient; those are contained in Exhibit 10. The purpose of my notes is to document the statements and observations relevant to diagnosis and treatment, of course. I also spoke with Charlie after the session. I recommended

1 weekly sessions since Grady appeared quite angry with signs of being fixated on revenge against
2 the neighbor. Charlie said they could not afford weekly sessions over the whole summer, so we
3 agreed on bi-weekly appointments every other Friday at 4:30 p.m. since that would be right after
4 school once it started. While I would have preferred to hold weekly sessions with Grady, I was
5 comfortable with bi-weekly sessions, sympathetic to the costs, but encouraged by the fact that
6 Charlie was assuming therapy would continue through the start of the school year. My rates are
7 on the higher side of the average for professionals with my experience, but they are certainly not
8 the highest – and I believe my work is certainly better than the average child therapist.

10 After that first session, I noted some possible diagnoses to explain Grady's behavior, but these
11 were just initial ideas. It would be exceedingly rare to arrive at the perfect diagnosis after one hour
12 of discussion. Not just rare; exceedingly rare. All of the potential diagnoses listed in Exhibit 10
13 after the first session related to impulsive behavior, which was an appropriate initial assessment.
14 Grady was very smart yet doing very juvenile things, like pointing lasers at airplanes. Not to be
15 blunt about it, but impulsive acts are those done without much thinking.

17 You can read my notes about the handful of sessions after that, but those were very typical,
18 textbook discussions in the beginning stages of diagnosis and treatment of an adolescent boy.
19 Grady was initially fixated on Whitacre and what he perceived as injustice, but he gradually
20 showed improvement and maturity as we talked through his feelings in those first sessions. I spoke
21 with Charlie for an extended period after the fourth session because I was concerned that Grady
22 was feeling lonely. He'd mentioned several times that he felt isolated and wasn't able to hang out
23 with his friends. I was supportive of Charlie grounding Grady and taking away his phone and
24 computer after finding the laser, but social development in adolescents is also a critical part of
25 maturity. There are mountains of academic studies about what happens to adolescents when they
26 are extremely isolated – nothing good. I recommended Charlie let their son have his phone or
27 laptop for a limited time each day in Charlie's presence and consider allowing Kennedy or any
28 other friend to visit, again with Charlie there.

30 Those recommendations proved perfect. I was extremely pleased with Grady's attitude and spirits
31 during the next session on August 15. Zero signs of loneliness. He talked at length about school,
32 swimming, and hanging out with Kennedy. They were in the same AP Chemistry class, and Grady
33 was excited to have a friend there. He didn't bring up or reference anything related to Whitacre,
34 the cop coming to his house, or any of that. Grady had moved past it all. As you can see from the
35 notes, I had considered a diagnosis of Disruptive Mood Dysregulation Disorder (DMDD), which
36 is basically severe recurring temper outbursts, but I dismissed this after concluding the laser pointer
37 was an isolated incident.

39 Grady's swim try-outs happened before our next session, September 5. I knew immediately at the
40 start – there had been a big negative turning point. Grady talked a lot that day, more than ever
41 before. It took a while for me to get the gist of what happened in the try-outs. But I recognized
42 immediately that Grady was fixated on a new target, a senior student named Julien, and that he
43 believed he had been grievously wronged by Julien. Something to do with altering Grady's lap
44 time during the try-outs. Grady also complained a lot about the swim coach, who is notably
45 Grady's chemistry teacher, too. Coach Flynn ignored Grady's complaints about Julien. While
46 Grady did not expressly say anything about getting back at Julien or planning some revenge, I

1 recognized a lot of statements and body language in Grady similar to what I observed in our first
2 session, when he ranted about Whitacre and the cop. I thought a lot about Grady that night. And
3 Rexfordism. I went back to my notes and saw it – the Rexfordism Progression. Let's pause here
4 to briefly cover the basics of Rexfordism. I am a huge fan of acronyms, so I created one in the
5 name itself: R-E-X-F-O-R-D.

7 First, **R – Random Injustice**. The adolescent perceives he is the victim of a random injustice
8 deliberately committed by a bad actor. Most often, this takes the form of a false accusation or
9 disproportionate punishment. Second, **E – Even, Worse**. The adolescent impulsively pushes back
10 against who they perceive as the bad actor, to get even with the person who caused the injustice.
11 This usually manifests as a prank or other act that causes indirect harm to the perceived bad actor,
12 such as property damage or public humiliation. Yet the attempt unquestionably backfires.

14 Third, **X – Exceptional Change**. After the adolescent is caught and punished for the backfired
15 counterattack, he not only corrects his behavior – he transforms into a model kid for his age.
16 Inexplicably so. The adolescent's prior impulsive or oppositional behavior immediately
17 disappears while his grades, athletic performance, politeness and cooperative behavior soar. These
18 changes must be meaningfully different from the adolescent's prior functioning, remain for a long
19 period of time, and not be explained by other causes like substance abuse or other psychiatric
20 disorders. While I had thought that Grady might be exhibiting signs of Rexfordism after the August
21 15 session, his turnaround was more likely explained by exceptional therapy. Still, I noted it as a
22 possibility, as you can see. I wanted to see if the middle of the Rexfordism Progression – the
23 EXFO, as I call it – started to reveal itself.

25 The fourth step in the progression is **F – Fraud / Forgery / Framed / Falsity**. After demonstrating
26 remarkably good behavior for a sustained period of time, the adolescent suffers some form of
27 dishonesty that uniquely harms them, and all of their appeals to people with the ability to remedy
28 or mitigate the situation go unanswered.

30 I called Charlie Quartz on September 6 because there was a lot I wanted to talk about. I wanted to
31 describe what I had seen in Grady – and some very specific things to look for, and to report
32 immediately, if observed. I did not tell Charlie that I had suspected Rexfordism at this time, for
33 two reasons. One, I wasn't certain about the diagnosis yet. Two, the disorder is not contained in
34 the DSM or Diagnostic of Statistical Medicine, so it's not an "official" disorder, but it is accepted
35 by a sizeable portion of the academic community – and hotly debated in medical journals and other
36 publications. But I did not want to get into all of that yet with Charlie. Not until I was more certain
37 about the possible diagnosis. I was definitely concerned that the swim try-outs may have shoved
38 Grady into the fourth step of the progression – the Fraud step. That is a defining moment in the
39 Rexford Progression.

41 Thus, I was very concentrated on the fifth step, **O – Overpowered**. You can actually add in all of
42 the O-words from Survivor in there because any will work – Outwitted, Outplayed, whatever.
43 After the impact of the fourth step, the adolescent fights back again now against whoever they
44 perceive as the dishonest actor – the deceiver, the liar. No matter what the adolescent does, they
45 simply cannot prevail over their enemy despite repeated attempts – often as a result of bad luck
46 more than anything.

1 And now the interesting part. The adolescent starts plotting a painfully slow, incredibly
2 meticulous, horribly cruel plan for revenge while simultaneously acting as the perfect child. All
3 while directly interacting with their perceived enemy. This is step six is **R – Revenge, Reserved**.
4 It's this duality – outward angelic behavior, inward deceptive scheming – that truly defines
5 Rexfordism. It's the tenacity and patience required to keep up the outward appearance, which
6 takes significant mental focus for a young boy, especially while planning a sophisticated revenge
7 scheme. The sole disconfirming factor during this process – a key sign there is no Rexfordism –
8 is the subject's voluntary, intentional exposure to the bad actor. This means, the adolescent goes
9 out of his way to seek time with the bad actor often in a scenario where the bad actor has essentially
10 full control or power over them. While this may seem counter-intuitive, the Rexfordist is usually
11 unable to control himself for long periods of time near the target while he's also scheming his
12 revenge plan against them. The ultimate, seventh step is, naturally, **D – Death, Damage,**
13 **Destruction**. The typical onset of the disorder is between the ages of 13 and 16. It only affects
14 males, but studies are limited as to the effect on adolescent females.

15
16 That brings us to my call to Charlie on September 6. To pull off any sophisticated revenge plot,
17 the adolescent will need certain tools, resources, or information about their target. A Rexfordist
18 teen will gather these resources gradually and carefully to avoid detection. I advised Charlie to
19 strictly monitor their son's online activity and online purchases. Charlie said they shared an E-
20 Mazon account with Grady so they could easily monitor those purchases – and would. Grady had
21 to keep his laptop at home because the school did not allow them.

22
23 Charlie knew the password to his computer, so they had plenty of opportunity to inspect that as
24 well. I asked Charlie to monitor whether Grady was spending more time in his room, even without
25 any electronics, or otherwise isolating himself more often than normal. I also wanted to know if
26 Grady continued to talk about Julien, Coach Flynn, or the perceived unfairness in the swim try-
27 outs – or if Grady was noticeably talking less around the house. Finally, I told Charlie that these
28 signs may be very hard to see, and that Grady may take steps to conceal things he is doing, so
29 Charlie needed to be vigilant. There have been several cases of a Rexfordist teen killing another
30 person, but most afflicted by Rexfordism seriously and significantly injured their target. The
31 violent outburst after meticulous planning is the hallmark of the final step in the Rexfordism
32 Progression.

33
34 I didn't hear a word from Charlie before my next session with Grady – other than them forwarding
35 me this transcript in Exhibit 3 about twenty minutes before they arrived. I wasn't able to read it
36 until afterwards. So, you can imagine my shock when I learned Grady had been suspended from
37 school for several pranks they had done to Younger. The one-week suspension was the epitome
38 of a Step Five Overpowered Moment following repeated attempts by Grady to get back at their
39 perceived target. Candidly, I was a bit perturbed that Charlie had not called me after any of the
40 three pranks, but I understand it happened in pretty quick sequence. I tried to speak with Grady
41 and learn what had happened, but he refused to say a single word. I talked to him for nearly twenty
42 minutes before I ended the session. Grady walked silently to the car; then I spoke to Charlie. I
43 said I wouldn't charge them for the session, but I wanted to see Grady back on Monday to try
44 again. Charlie agreed to come back then.

1 I reviewed the transcript over the weekend and spoke to Charlie before the Monday session on
2 September 22. The transcript made it very clear the F – Fraud step had certainly occurred. Grady
3 was willing to speak finally, so that was a good start, but his answers were unusually short and
4 staccato. I got him to talk a little bit about the discipline hearing at the school. Grady was clearly
5 angry about that process and stressed he was entirely innocent – but with very flat affect. I could
6 see the simmering rage, though. Charlie agreed to continue sessions every day that week while
7 Grady was on suspension. Their former spouse had agreed to help with the cost, and that was a
8 blessing because it took all of those sessions to finally get Grady to open up about the three pranks
9 and his feelings around all of that. His mood was polite. He talked a little more in each one, but
10 I was becoming more convinced that Grady was suffering from Rexfordism. Things were just too
11 good to be true. And that meant Charlie and I needed to watch very closely for any resource
12 gathering or revenge planning that Grady may be thinking about as his final attack.

13
14 I was cautiously optimistic with Grady by the end of that week. During our Friday session, he was
15 extremely polite and more talkative. He talked a lot about school, swimming practice, and helping
16 Charlie in the garden and around the house. He had returned to school that day after serving the
17 suspension, and I think being back in school was a very positive influence on him. This was
18 precisely the good behavior that I wanted to see – but it was also potentially a sign of second half
19 of the Rexford Progression. What I call the “deceptive miracle” in behavior change.

20
21 Several times during that week, and again at the end of the Friday session, I recommended to
22 Charlie that I prescribe a very low dose sedative to ensure that Grady was not still harboring
23 frustration, jealousy, or anger towards Julien under the surface. But Charlie refused each time,
24 something about not wanting a “zombie son.” We did agree, however, to continue bi-weekly
25 sessions going forward. Declining the medication was a cautious parental choice by Charlie; there
26 is always the risk of side effects in adolescents, so Charlie was within their right to decline my
27 recommendation.

28
29 I strongly reminded Charlie to stay vigilant in watching Grady. Monitor all online activity and
30 pay close attention to the most minor behavior changes. Fortunately, I continued to see positive
31 results from Grady over the next two months – continued good behavior, zero signs that he was
32 fixated on his perceived grudge against Younger, and no evidence of social withdrawal or reduced
33 speech. Charlie also did not report any of the signs I had asked them to diligently watch for. In
34 early November, Grady asked me if I thought it was a good idea for him to ask to compete in the
35 swim championships. I told Grady their recent behavior had been excellent and that he should
36 raise the idea with Coach Flynn but that there was a good chance they would say no.

37
38 Grady was so excited and thrilled at our next session – the school had said yes. Grady even told
39 me that Coach Flynn had said they were immensely proud of Grady’s changes since the
40 suspension, and Grady said they had been very focused on making Coach Flynn proud and proving
41 there was no bad blood with Younger anymore. I had zero reason to suspect at that time – or any
42 time previous – that Grady planned to kill or harm Younger. And I was specifically looking for
43 any and every sign, Charlie too, but I saw none nor were any brought to my attention. Grady
44 certainly never talked about planning to do anything to Younger; I certainly would have called the
45 police had I heard that. I have an ethical responsibility to do so.

1 In fact, because I had started to suspect a possible diagnosis of Rexfordism in Grady, I tried to trap
2 him into revealing any hidden anger or plans against Julien during several of our later sessions.
3 But I saw and observed nothing on that. I also confirmed multiple times that Grady had voluntarily
4 sought out time with Julien despite all of the continued teasing. Charlie reported this to me on
5 their own accord at least twice in between sessions. To be honest, Grady was perfectly
6 disconfirmed for Rexfordism at this point. He'd shown all of the signs leading up to the last two
7 stages, but he was the poster child for voluntary engagement with his perceived enemy. This was
8 a model example of maturity and growth.

9
10 I actually gave a lecture about this disconfirmation factor for Rexfordism on October 4, 2025. It
11 was live-streamed on the internet and decently attended in the conference room by the airport.
12 While I gave my standard introduction and explanation of the disorder, I spent the vast majority
13 of the time on that disconfirmation factor – the voluntary embrace of the enemy.

14
15 Charlie and Grady did not show for our next scheduled session. I read about the police searching
16 for Grady in the newspaper on Thanksgiving Day. They believed Grady had absconded or fled
17 with Charlie's former spouse, Morgan Snyder, in Europe. For the record, I did not speak with
18 Grady or Charlie after the November 21 session – in person, over the phone, or electronically. I
19 know now that the State claims Grady intentionally poisoned Younger to kill him. I've seen a lot
20 of evidence and testimony that backs that up. But we aren't here to decide whether Grady killed
21 Julien or not; this case is about Charlie and whether they could've somehow stopped Grady. In
22 my professional opinion and as someone who spoke at length with Grady, there was no reason for
23 anyone – including Charlie – to suspect Grady was planning something so dangerous.

24
25 Further affiant sayeth naught.

28
29 **SIGNED AND SWORN TO BEFORE ME** the undersigned authority on this the 15th
30 day of December, 2025.

1 **ADDENDUM TO STATEMENT OF ENYO EHD, PH.D.**

2
3 At the time I was providing treatment to Grady Quartz, my rates were \$300 per one-hour session
4 and \$500 per hour to prepare for or attend any hearing, trial, or deposition. Charlie Quartz paid
5 me for all of the sessions with Grady, and I waived charging them for the time I spent preparing
6 for and attending this trial. That's in part because I firmly believe there was no way Charlie Quartz
7 could have stopped their son from harming Julien Younger. The level of deception, planning,
8 misdirection, patient resource gathering – it is all extraordinary. Look at the sly and slow gathering
9 of resources in Exhibits 7 and 9 – and the deception to hide it right under Charlie's nose and foot.
10 Grady knew that Charlie came into his room nearly every day. And I strongly believe Grady
11 watched my October lecture on the disconfirmation factor and then used it against me and everyone
12 else. That is sinister level stuff. Other than locking Grady in the basement like a prisoner in his
13 own home, there was no way in my opinion that Charlie could have prevented what Grady did. If
14 there had been some interdiction by Charlie, Grady would have just adapted his plan and gone
15 after Julien another way or at a different time.

16
17 To be sure, Grady's case is so extraordinary that it got a lot of attention from academics, media
18 outlets, and fellow therapists – including several I won't name who used to tell me Rexfordism
19 was a fantasy diagnosis. Well, it's official! The DSM is adding Rexfordism in its next edition!
20 That will be at the end of this year, and yes, technically, it's not officially official. They can change
21 their mind up until publication, and that's happened a couple times in the past, but those have
22 always been issues about forging data in clinical trials and stuff like that. This case plus all the
23 separate attention on Rexfordism has turned this town into a bit of a circus. My phone hasn't
24 stopped ringing for months – new clients, interview requests, and even invitations to parties.

25
26 Today, my rates are \$1,500 per one-hour session and \$2,500 per hour to do anything at trial or
27 deposition. You may think that's a silly increase compared to my prior rates, but I am already
28 booked up solid through the end of 2027.

29
30 This concludes my sworn testimony.

FACT STATEMENT OF KENNEDY DIXON

Um, hi, I guess you're supposed to start with your name. Mine's Kennedy. I'm 15 years old. I'm a sophomore at Texoma High. I'm not going to "yip," so don't ask. I did not want to give this statement. My parents are making me. It's all part of this grand punishment package they've put on me. I'm grounded until the summer, like six months away. I barely get to use my phone, only at home. That makes the time go by even slower. My parents told me I have to tell the truth in this statement or my punishment would get even worse. They think I did something wrong in all this. I didn't. If I'd seen a sign that Grady Quartz was planning to kill or hurt Julien, I would have totally said something. Grady didn't like Julien, no doubt. He probably disliked Julien more than anyone. You would, too, if you were picked on and bullied for no reason.

I was lab partners with Grady in Coach Flynn's Chemistry class. We became friends the summer before that. We first met at one of those farmer's markets. My parents dragged me to it. Eight on a Saturday morning, gross. Grady's parent, Charlie, was a farmer selling vegetables. Grady was forced to help sell stuff at the market, he later told me. I did feel a bit sorry for him. We chatted while our folks argued over a gourd or something. That was in mid-June. We hit it off. I went over to Grady's house on June 18 for the first time. That's his house on the left of Exhibit 1. We hung out chatting about things. I learned Grady was real big into swimming. He said he practiced at the Texoma pool nearly every day. Grady said it was about a 15 minute walk each direction and that he'd swim laps for about two hours every day to practice. Dedication.

Grady talked a bunch about this mean neighbor, Whitacre, who had harassed him and Charlie. Grady randomly asked me if I had a laser pointer. I did – we have cats at home. I loaned it to Grady, a very small silver one. I was probably Grady's best friend; I think I was his only friend. I knew Julien Younger, too. Well, I knew of him – he was a senior. Way more popular than me. But he wasn't innocent like some people say. Julien teased and bullied me relentlessly when I was a freshman. Not so much now that I'm a sophomore. I don't support murder or violence, obviously. I still can't believe someone about my age died after being poisoned. But Julien was an entitled bully who probably would never have stopped tormenting people. I don't miss him. Crazy thing was, when I left Grady's house that day, I saw an elderly man near the fence line between Grady's house and the neighbor's property. He had binoculars and was looking toward Grady's house. When he saw me, he yelled, "What are you looking at kid?" I just kept walking.

I didn't see Grady much in July. I saw him from a distance on July 4 at a late-night party some of the older kids had organized. They were shooting off fireworks past midnight. I meant to say hi to Grady, but I couldn't find him later. There were 20 or so kids there, so he was easy to miss leaving. He also randomly came by my house in the middle of the day on July 11. He wanted to hang out, but I was in the middle of summer chores my parents had demanded, so he left. Then I saw him at the farmer's market on July 19. He was super friendly, and I thought he was cool. But I heard nothing for weeks. Then he texted me in early August asking me to come over again, and I did on August 2. Grady was really excited about the syllabus in our AP Chemistry class and that we'd been assigned as lab partners. At some point, he apologized for ghosting me. He said he'd been grounded and sent to therapy. That was after Charlie found the laser pointer I loaned to him. He said Whitacre and the cop had accused him of shooting the laser beam at airplanes. I freaked out because my parents would kill me if Grady used my laser pointer like that. But Grady insisted

1 that happened the day before I gave him my laser pointer. I was super relieved. I asked for the
2 laser pointer back. Grady said Charlie had thrown it away – but he promised to get me a new one.
3 He never did, though. I asked him how he'd gotten out for the late July 4 party; he just grinned.
4 I asked if it was just the laser pointer that got him grounded. Grady said it was all of the false
5 claims by the neighbor – claiming Grady shot down a drone, put paint all over the neighbor's car,
6 and the laser. A cop came to his house three times, too. I went over to Grady's house once more
7 before school started on August 13. We played with his chemistry set in the basement, hung out,
8 and had a good time. He was stoked to start high school – but it wasn't a hot start. All because of
9 the bully Julien Younger. I saw Julien tease, make fun of, and bully Grady loads of times at school
10 right from the jump. In the hallways or Chemistry class. I remember plenty of times Julien said
11 mean things to Grady in class. Like the first day, Julien made some loud comment in AP Chemistry
12 that he wasn't aware that toddlers could attend high school now. It was loud enough for everyone
13 to hear it, Coach included, but no one said anything to Julien about it. Just giggles. I told Grady
14 to ignore Julien and he would find a new target. Grady said that he would, but then the swim try-
15 outs happened and Julien started calling Grady "Goldy," like a goldfish.

16
17 I'm not on the swim team. I can barely dog paddle, but I heard all about the sabotage from Grady.
18 Every time Grady told it, the story was exactly the same. Julien, as a senior captain, got to help
19 time some of the laps during try-outs. Julien specifically wanted to time Grady's laps, totally suss.
20 Julien started the stopwatch early so Grady's time would be inflated and longer. Grady said he
21 knows this happened because he hit the wall ahead of Billy Dreskin yet Billy's lap time was
22 reported as faster than Grady's. He told Coach Flynn about it the day the teams were posted; I
23 know because I stood near the doorway to watch and listen. Coach Flynn took Julien's side. Not
24 surprising. Coach thinks Julien walks on water and could never do wrong. I'm sure that only
25 enabled Julien to continue acting like a bully and a jerk. But what really got me was how Coach
26 Flynn wasn't even listening to Grady. Coach hardly even looked at him, as if they couldn't have
27 cared less. I think that made Grady more focused on getting back at Julien. Just guessing, but I
28 don't blame him one bit. It just crushed Grady not to make Varsity. I told him that no freshman
29 makes a Varsity team, but Grady was shook. Julien was all he could talk about after that.

30
31 Grady and I walked home together the day the swim teams were posted. It was about fifteen
32 minutes from Grady's house to mine, and I passed his on the way to mine. We walked home
33 together every day after that. Most times, I left him at his house and continued to mine, but every
34 now and then, I would stay at Grady's for a bit to hang out or work on some homework in his
35 basement. One time right after the swim stuff happened to him, a few days after Labor Day, I was
36 waiting for Grady to change clothes in his room. Charlie started asking me questions about school
37 and such. I basically said "good" to every question but added that I thought Julien was a jerk and
38 unfairly going after Grady. I wanted Charlie to know that things had been pretty unfair to Grady,
39 to support him as my friend you know. Grady came out right then and we headed to the basement
40 to do some homework. That's his basement in Exhibit 6 and his lab equipment too.

41
42 Look, I literally didn't see Grady do anything to Julien's desk, but I'm certain that he rigged it.
43 Grady had been fiddling with the screws in his own desk the day or two before. It was almost like
44 he was figuring out how to take it apart. I asked what he was doing. "Just learning how these are
45 made. They don't seem that sturdy," he said. After Julien's desk disintegrated, Grady whispered
46 to me: "I told you, not sturdy." He had a little smile after he said it. Julien stood and screamed at

1 Grady with his big witchy finger pointed at Grady, and me kind of. Coach Flynn sent Julien to the
2 nurse. Then, Coach searched Grady's backpack but found nothing incriminating. Grady was far
3 too smart for that. Grady offered to let Coach search more but they declined. On the walk home
4 that day, Grady talked a lot about how Julien had looked after his desk fell apart. The next day,
5 he talked all about what Julien had done that day, like Grady was spying on his nemesis.

6
7 A couple days later, the last class had just let out. I was at my locker and this big BANG clapped
8 behind me. I must have jumped a meter. Confetti appeared like rain. I'm still finding that junk
9 in my bag, all over my locker, and even in my room. Julien was on the ground and cursing loudly.
10 The no-no words you can't say at school, ever. He was raging. He punched one of the lockers
11 and dented the dang thing. I distinctly heard him say Grady's name – long, slow, and guttural. I
12 looked around for Grady but didn't see him. So, I texted him on Mist, the text app we all use
13 because your messages are encrypted and deleted automatically after seven days. Grady
14 responded: "Walking home. What's up, did a bomb go off or something?" with several kangaroo
15 emojis. I called Grady when I got that text and asked him how he had found that confetti bomb.
16 Grady just said, "You can find anything on the internet." I said, "What about Julien? He's super
17 angry." Grady replied, "Revenge requires risk." It was odd that Grady hadn't waited for me to
18 walk home, probably the only time he did that.

19
20 Julien tried to fight Grady after school that Friday. I was there because we were about to head
21 home. Julien threatened Grady, grabbed him hard by the shirt, and threw him to the ground. Then,
22 Julien did it again when Grady tried to get up, and again a third time with a mean kick to Grady's
23 ribs. I went to help and told Julien to knock it off, but he leaned into me and snarled, "You want
24 to be next Dixie cup?" That's what Julien called me sometimes to make fun of my last name.
25 Super clever. But I stood there and stared right back at him. Probably the only time I've ever been
26 that brave. Julien walked away. I helped Grady up and we headed home. He was fine by the time
27 we got to his house. I figured he was over Julien by that point; the score had been settled.

28
29 Look, I'll give you the first two – the desk and confetti bomb. Grady did both of those things,
30 even though no one can prove it. But the explosion in lab class, literally impossible. All the
31 chemicals and stuff we use in lab are locked up. Only Coach Flynn has a key. Plus there are
32 cameras everywhere in school now. There's no way Grady could've broken into the locked cabinet
33 without being seen on the security tapes. I know Coach Flynn says Grady must have bought some
34 chemicals online and used those. Sure, it's true that Grady has some pretty serious lab equipment
35 in the basement of his house, but none of that is illegal. Plus he was super safe and had a bunch
36 of protective gear. He also usually kept the window above his lab open so the basement was really
37 ventilated. That's it in Exhibit 8. But even if Grady had snuck in some chemical or solution to
38 prank Julien, Grady never got close to Julien's lab station. We walked in together. Grady was
39 with me at our lab during the whole class up until the explosion. That was a doozy, knocked me
40 off my feet. Those sprinklers in the ceiling must be top of the line. I was drenched in seconds and
41 thought the room would flood. We were all sent outside then sent home after some medical people
42 checked us all out.

43
44 Grady and I decided to hang out at his house since we had a free day. My parents let me – after
45 asking me a thousand times if I was OK since I'd been in the room with the explosion. Grady and
46 I chatted about the explosion, like being there when it happened, but Grady didn't say anything

1 that made me think he had anything to do with it. Not one thing. We did a couple of experiments
2 in the basement for pure fun. Charlie checked on us at least two times and even inspected the
3 experiment once to see what we were up to. I never considered that Grady could've been involved
4 in the lab explosion in Coach Flynn's class until I heard the school had hauled Grady in for a
5 discipline hearing. You don't ever want to be in one of those. I tried to chat with Grady after the
6 hearing, but Charlie was there too and ushered Grady straight to their car. I learned the school
7 suspended Grady for a week. I guess that started the next day because I didn't see Grady for a
8 week. I texted him a couple times during the suspension week, checking in, saying hey. Grady
9 never responded. I figured Charlie had taken his phone away. I honestly felt bad for Grady; it
10 seemed like everyone was ganging up on him with pre-determined beliefs.

11
12 When Grady was back in school, everything seemed to be perfectly normal. Like he'd never been
13 suspended at all. Grady was like a perfect student from that point on. His grades went way up, he
14 did extra credit, and he was nice – like genuinely nice – to Julien every time I saw them interact.
15 I even heard Grady had asked Julien for help in swim practice, tips to get better, to swim better.
16 Like multiple times over the course of October. I heard it from several kids on the swim teams. It
17 was a crazy turnaround – and it lasted the whole semester. We started walking back when he was
18 back from suspension, and I was able to start hanging out at his house again in early October. At
19 first, on the walks home, there was a lot of animated talk by Grady about Julien and Whitacre. He
20 seemed to waver between anger and acceptance; I mostly just listened and tried to support. I asked
21 if Whitacre had messed with him again since Grady seemed to bring up the neighbor out of the
22 blue, but Grady said they hadn't seen Whitacre in ages. It seemed to help Grady to vent and get
23 all of his frustration out about all that. He had truly transformed at school after coming back from
24 suspension. Some kids are good at pretending to be all good and nice, but it never lasts. Grady
25 was different. He asked me in October if he could ship a package to my house since it was some
26 new glass lab equipment. His delivery person was never careful with their packages. I agreed and
27 brought him the package on Saturday since it was delivered late on Friday. I didn't open it. It was
28 his order. I gave it to Grady right in front of Charlie; they seemed to know all about it.

29
30 Grady was really smart on the science stuff, especially chemistry. That's why I think he was so
31 upset after getting a 93 on a lab report we did in AP Chemistry. I got a 100 on mine, and our
32 reports were almost verbatim – that made sense since we were lab partners. Honestly, I couldn't
33 see any difference between my report and Grady's, so I did empathize with him being treated
34 unfairly by Coach. That was October 22. I do need to be clear: Grady wasn't some genius mad
35 scientist. All of the experiments I saw and helped with in his basement were basic biscuit stuff.
36 No dangerous chemicals or anything. I heard Grady tell Charlie a few times that he was working
37 on experiments for a school science fair. I knew that was a lie. There was no school science fair;
38 but Grady was my friend. You don't rat on your friend, especially to one of their parents. Have
39 you seen any movie or TV show where that bodes well for the rat – nope. Some of those
40 experiments gave off an odor, like a sulfuric rotten egg smell, but that is common even in basic
41 chemistry experiments. And since we were in the basement with the window cracked most of the
42 time, the smell never lasted very long.

43
44 Grady asked me if I thought he should ask about competing in the swim championships at the end
45 of November. I said, "No cap. You've been the poster child for a perfect student." Grady nodded
46 and said his therapist had said the same thing. I saw that smile again. Grady asked a few days

1 later and was super jazzed when he told me the school had agreed. I was really happy for him. I
2 know Grady had put in a lot of hard work and extra practice with the swim team. On November
3 9, I was at Grady's house and he showed me a new experiment in the basement. The next day
4 after school, I helped replicate the experiment with Grady. All harmless. Definitely not some
5 toxic poison. But I can't remember exactly what we were doing; I didn't know I needed to take
6 copious notes. Neither of us had goggles or protective gear on; it was that basic. Charlie came
7 downstairs two or three times while we had the experiment going, both days. I do remember a
8 faint sulfuric smell on Sunday, but that was before we started the experiment. The smell was
9 already there. I was amazed at Grady's change in behavior – and how persistent it had been –
10 when I heard Julien had started calling Grady "Goldy" again. I don't know anything about how
11 often that went on in swim practice, but the nickname seemed to come back to life in November.
12 Julien and his friends would say it in class and the hallways, but Grady was cool as a cucumber.

13
14 I was there at the swim championships. I saw Grady swim in the JV races and win both by a long
15 way. It wasn't even close. I waved to Grady at one point and got a wave back, but I didn't see
16 him leave after his last race. At the time, I didn't know that Grady was going on a trip over
17 Thanksgiving. A lot of kids take that week off to travel with their folks, but Grady told me several
18 times before that he didn't have any plans. I remember because he was complaining about Charlie
19 being a farmer and them not having as much money as everyone else. In fact, that was the Saturday
20 when I brought over the beaker set. But later I learned Grady had gone to France with their other
21 parent, Morgan. I didn't know Grady's other parent was even still around; he had never mentioned
22 Morgan before to me. As for me and my family, my grandmother lives in Napa Valley, so we had
23 Thanksgiving there. But boy, all of the turkey talk was about Julien's death. Since I had been at
24 the pool when it all went down, I had to tell the story a bunch of times. Everyone kept asking me.

25
26 It was the very first Varsity race. Julien was in lane two. Even I could tell something was off with
27 him, like he just ran completely out of gas on the last lap. Julien had been in first like the whole
28 race but faded bad at the end. I saw Coach Flynn go up to Julien after that race to talk but Julien
29 walked away. Probably just really angry at losing; Julien was super competitive and a hothead.
30 Julien headed off to the locker room. It was one or two races later when I heard a loud scream
31 coming from that area. Someone shouted to call an ambulance. I saw Coach Flynn sprint to the
32 locker rooms. The races stopped. A bunch of us in the stands were talking even though no one
33 knew anything yet. Sometime later, I saw Coach Flynn come back out and talk to the swimmers
34 and other coaches. Then someone on the loudspeaker said there had been a medical emergency
35 and the rest of the races would be postponed.

36
37 Later, I learned Julien was in the hospital – and then that he died. From a toxic substance. It
38 sounded awful when my parents were describing it based on what they had heard from some of
39 the other parents. No one figured Julien had been murdered at the time. Everyone thought it had
40 been a bad accident or allergic reaction or something. Then my dad said he had heard the police
41 had searched Grady's house twice over the Thanksgiving break. My mom wanted to know about
42 everything I saw inside the house. Nothing out of the ordinary, I repeated. The rumor mill in the
43 parent circle really heated up when word got out that Grady and Morgan were missing in Europe.
44 The police said Grady murdered Julien, and they put out some global search for him. No one has
45 seen him since. I called and texted Grady a couple times after I heard about the police search –
46 just curious if I got through – but my texts were undelivered; my calls never connected.

1
2 I got a little taste of the harassment from Detective Reyne when the cop came to my house and
3 asked my folks to speak with me. That was right after Grady disappeared and we returned from
4 California. Um, my parents are “passionate” and rather opinionated. They are both lawyers, and
5 they peppered the cop with a bunch of questions and legal points that I couldn’t follow. They
6 weren’t arguing with the cop, but it was obvious to me that Detective Reyne was getting really
7 irritated by their stonewalling. I was thrilled; I didn’t want to talk to some cop even though I did
8 nothing wrong. As far as I knew, the cop was eager to blame any kid they could find, so I gave a
9 big smile when they told the cop to leave their property. I’m not sure what changed and why they
10 later forced me to write this statement, but parents be parenting.

11
12 At some point, I was told that the cops found this hidden compartment in the floor of Grady’s room
13 with all kinds of stuff in it. Yep, Exhibit 7. Grady told me about a hidden cubby once before
14 during the summer in early August. But he swore me to secrecy. So, I never told anyone – until
15 now. Grady told me he had found the cubby by accident. It had a rusty tool inside, and Grady
16 assumed it had been some sort of work hatch or something when they were building the house
17 many years ago. But I never saw the cubby itself or heard about anything inside the cubby. Never
18 saw Grady put anything in there or pull anything out. He just talked about it; once. I thought it
19 was cool. Kids need privacy too, you know. And Grady was a clever, crafty kid. It doesn’t
20 surprise me that no one, Charlie included, ever found that hidden compartment until the cops tore
21 up the carpet.

22
23 Further affiant sayeth naught.

24

28 day of December, 2025.
29

1 **ADDENDUM TO STATEMENT OF KENNEDY DIXON**

2
3 It feels like ages ago when Julien died and Grady disappeared. I know it's only been a little more
4 than a year, but to me it's felt like a lifetime. I'm a junior now. I've tried to move on from all of
5 this, but it's literally impossible. There is a shrine thing at Julien's old locker. I see it the hallway
6 every day. I'm still finding that stupid confetti every now and then, like little cookie crumbs from
7 Grady or something. I'm focused now on picking a college – one that is far, far away from this
8 crazy place. I used to think it was weird, but this place is on a different level now. Protestors at
9 the farmer's market, rumors of the nastiest type, and news people flooding the town. Some reporter
10 even tried to talk to me at the gas station. My parents went ballistic when I told them and threatened
11 to sue the entire conglomerate that owned the news station.

12
13 You know, I've thought long and hard about whether I could have stopped what Grady did to
14 Julien. Or if there were signs that I missed or should have noticed. But I don't think there was
15 anything I could have done. Grady fooled me completely and kept their parent Charlie even more
16 in the dark. A lot of what I've read is pretty staggering in terms of how sophisticated and con-
17 man-like it all is. Grady truly was fixated on getting back at Julien – all that stuff in October
18 getting close and cozy to Julien while also planning his death – wild. All while leading me,
19 Charlie, Coach Flynn, and everyone else to believe that he had completely changed. The audacity
20 to endure criticism from Julien at swim practice, too. No wonder they've come up with this brand-
21 new disease to describe what must have been happening inside Grady's head – Rexfordism.

22
23 I am a thousand percent sure I had nothing to do with creating that toxin or any part. Nothing
24 smelled like rotten eggs when I was there in mid-November; nothing looked dangerous; we never
25 even wore anything more than eye protectors those two days. Charlie was also in and out of the
26 basement multiple times.

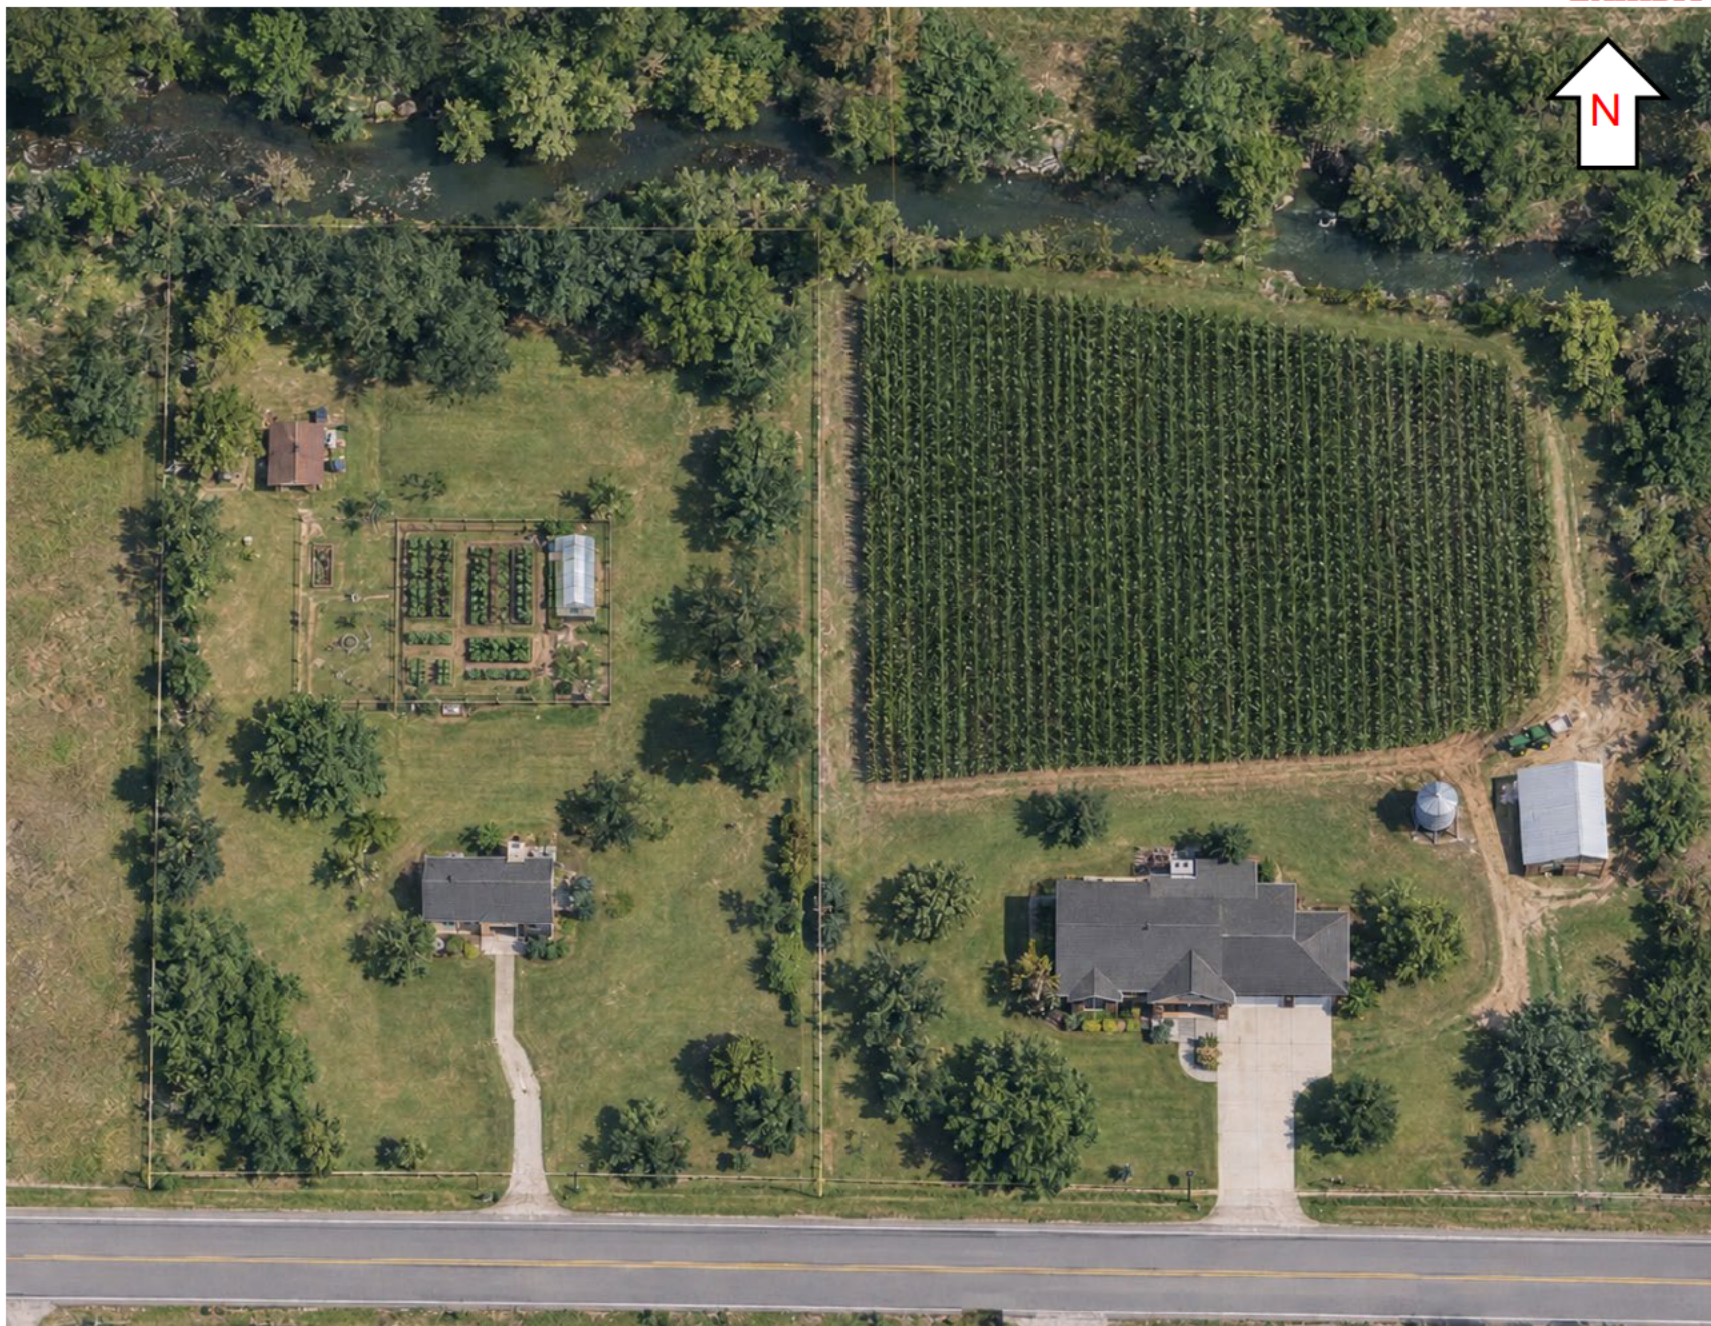

27
28 Finally, I saw in Coach Flynn's statement and one of their emails in Exhibit 2 that they claim to
29 have heard Grady tell me at school that he was planning some revenge on Julien. That never
30 happened; I am absolutely certain. Coach Flynn is either lying or badly misremembering.

31
32 This concludes my sworn testimony.
33

Subject: Re: Grady
Date: September 11, 2025; 2:12 p.m.

Charlie, we need to talk next week on Monday or Tuesday afternoon. Grady rigged a confetti bomb in Julien's locker yesterday after last class. It exploded and nearly blinded him. There's still confetti everywhere in the hallways today. Goldy says it wasn't him but Grady has the same look from the desk thing. I asked around; you have to order those confetti bomb things online. Check your and Grady's E-Mazon account (if he has one). Check his room too – masks, flashlights, lockpicking tools, and anything you have that may have recently gone missing.

Charlie. I overheard your son say he's planning on some payback on another student, Julien Younger. Grady's been upset about not making Varsity Swim, and he started his revenge tour this morning in my class. I won't tolerate that. Grady tampered with Julien's desk so it crumbled when Julien sat down. Julien could've really been hurt. I confronted your son about it. He denied it and I didn't find anything after emptying out his backpack – but he did it. You'll probably find screws in his room later. Please talk to him. I just don't want things to get out of hand between him and Julien.

Transcript of Discipline Board Hearing

September 18, 2025

Subject Student Grady Quartz (Freshman)

Matters Considered Incidents directed toward Julien Younger (Senior) causing physical danger to numerous students and school property

PERSONS PRESENT

BOARD CHAIR — Teresa McBride, Principal	(CHAIR)
BOARD MEMBER — Chandler Flynn, Teacher and Coach	(FLYNN)
BOARD MEMBER — Clare Simpson, Teacher	(SIMPSON)
SUBJECT — Grady Quartz (Freshman)	(GRADY)
PARENT/GUARDIAN — Charlie Quartz	(CHARLIE)

The following is a transcription of the recorded proceeding.

(Recording begins)

CHAIR: This hearing of the Discipline Board is called to order at 4:45 p.m. on September 18. We are meeting to consider three incidents that the school believes were committed by Grady Quartz in violation of school rules – tampering with another student’s desk, rigging a confetti bomb in another student’s locker, and switching chemicals in another student’s lab materials causing an explosion that shattered glass and set off school fire alarms and sprinkler systems. We will also determine what discipline, if any, is appropriate.

FLYNN: And for the record, the other student was the same in all three attacks, Julien Younger, a senior.

CHAIR: Ok, thank you Coach Flynn. Grady, your parent Charlie is present with you. You will have the opportunity to answer each allegation and to tell the Board anything you believe we should consider. Do you understand?

GRADY: I understand, Principal. And for the record, I did not do any of those things. You have no evidence that I did. But by all means, let the kangaroo court begin.

CHAIR: This hearing was convened at the recommendation of Board Member Coach Flynn, which was unanimously approved by myself and Board Member Ms. Clare Simpson. Coach, please briefly explain the basis of your recommendation.

FLYNN: Happy to. Due to some personal disagreements, Grady has directed a series of dangerously escalating pranks against Julien that endangered the entire school. First, Grady removed screws from Julien’s desk causing it to fall apart when Julien sat in it. Julien was thankfully unhurt. Second, Grady placed a confetti bomb in Julien’s locker that was booby-trapped to explode right in Julien’s face, which it did and could have blinded him. Finally, Grady switched out one of the solutions Julien was using during one of my chemistry labs without any warning. That switch caused an explosion inside my classroom shattering glass and setting off all the overhead sprinklers. It is an absolute miracle none of our students were hurt. We cannot take any more chances; these antics have to stop.

GRADY: You don’t have anything on me and you know it, Coach.

CHAIR: You will have a full opportunity to respond, Grady. We will take the incidents one at a time. Ms. Simpson?

SIMPSON: Grady, were you in the same classroom with Julien Younger when the desk incident happened?

GRADY: You know I was.

SIMPSON: But were you in the classroom that particular day?

GRADY: Me and the rest of the class.

SIMPSON: Had you argued with Julien before the desk thing?

GRADY: With Julien, negative.

SIMPSON: But you were angry with Julien?

GRADY: Yes, he sabotaged my swim try-outs. I told Coach Flynn but Coach doesn't believe me because they like the bully more than me.

FLYNN: That is a complete misrepresentation—

CHAIR: Coach, this is not a time to argue with the student. Anything else Ms. Simpson on the desk?

SIMPSON: No, Principal. Grady, would you like to say anything about the desk incident?

GRADY: Yeah, name one thing showing I did it. Coach searched my backpack and didn't find anything. I offered to let them search my locker too, but they turned me down. They'd already made up their mind. This whole thing is a witch hunt.

CHAIR: Let's turn to the confetti bomb. Grady, where were you when the thing went off?

GRADY: I was already walking home. I wasn't even there when it happened. I heard about it from other people. Did you look at the hallway cameras? Did any of that show me even near Julien's locker? I know the answer, no. I hate that jerk. I wouldn't go near his locker or his doofy hanger-on friends.

CHAIR: Nothing on the hallway cameras but there was some sort of glitch that prevented it from recording for a few minutes just before the explosion. Let's stay focused on the confetti bomb. We heard that you told another student that you set the confetti bomb. Is that right?

GRADY: Woah – who said that?

CHAIR: I'm not going to disclose who told us – but I am asking if you said it.

GRADY: No, I didn't say that. You guys are worse than the news with your unnamed anonymous sources.

CHAIR: Will you let us look through your texts on your phone?

GRADY: Absolutely not. You're out of your mind.

CHARLIE: He's not handing over his cellphone.

CHAIR: Ok, that's fine, the refusal is noted. I would just recommend, Charlie, that you look through those texts at home to be sure. Grady, do you have anything else to add about the confetti bomb?

GRADY: I didn't do it, so I have nothing more to add. Other than it's obvious the Board assumes a lot but knows very little.

CHAIR: Noted. Coach Flynn, you have the questions regarding the lab incident. You may proceed.

FLYNN: Thank you, Principal. The lab experiment asked the students to combine solutions that were provided at their lab stations before they arrived at class, isn't that right, Grady?

GRADY: Yes, and are you really cross-examining me right now? Did you stay up all night watching Law and Order?

CHAIR: That's enough, Grady. Answer the questions.

GRADY: There was just one question asked. The answer is yes.

FLYNN: Yes, you knew this was the set-up before the lab, didn't you?

GRADY: Yes, because you – the teacher – told us several days before. So we wouldn't get confused if the classroom door was locked at the start of class. Remember?

FLYNN: You were one of the first students through the door that class, right?

GRADY: I believe so. Me and Kennedy.

FLYNN: And you consider yourself very good at chemistry, don't you?

GRADY: So being smart is evidence against me now? Is this seriously the best you've got? Did it ever occur to you that Julien, the meathead, messed up his experiment? Isn't that far more likely than me doing some Houdini magic?

FLYNN: Do you hate Julien?

GRADY: Sure. Most everyone does.

FLYNN: I don't have anything else to ask.

CHAIR: Grady, did you at any time possess, move, relabel, or substitute any of the solutions used by Julien?

GRADY: No.

CHAIR: Did you ask or encourage another student to do so?

GRADY: No.

CHAIR: Did you know before the reaction that Julien had the wrong solutions?

GRADY: No.

CHAIR: Do you have any explanation for why all three incidents involved Julien and had you as the prime suspect?

GRADY: I reject the premise that I am the prime suspect for anything. You've shown me nothing that connects me to any of these things. If you punish me, it's only because you decided before we ever started this hearing.

CHAIR: The statements are noted. The Board will recess to deliberate.

(Recess for sixteen minutes)

(Hearing reconvened)

CHAIR: The Discipline Board has completed its deliberations. The Board has unanimously determined that discipline is warranted based on the three incidents considered together, the escalating danger of the conduct, and the need to protect students and staff. The Board's decision is that you will be suspended from school for one week. The suspension will begin tomorrow.

GRADY: I am innocent. You brought me in here after you had already decided what you wanted to do based on bias and false statements. Don't any of you forget – false witnesses always get their due.

CHARLIE: Grady, stop. We are leaving.

CHAIR: The hearing is concluded.

(Recording ends)

SHORT-FORM AUTOPSY REPORT BY MEDICAL EXAMINER

DECEDENT: *Julien Younger* **SEX:** *Male* **AGE:** *18*
HOME ADDRESS: *808 Durant Lane* **OCCUPATION:** *Student*
DATE OF DEATH: *November 23, 2025* **DATE OF AUTOPSY:** *November 24, 2025*

MANNER OF DEATH Accident
 Suicide
 Homicide X *Intentional Poisoning*
 Natural

CAUSE OF DEATH: *Acute cellular hypoxia due to exposure to synthetic poison (Clartaxin)*

COMMENTS: *Body is that of well-developed, well-nourished, healthy adult male consistent with the reported age of 18. Height is 74 inches; weight is 185 pounds. Rigor mortis fully developed; livor mortis is bright cherry-red in color, fixed, and present on the posterior surfaces of the body. No external injuries visible on body.*

Distinctive sulfuric aroma at start of internal examination. Extensive internal bleeding determined to be postmortem; lesions found in throat and nasal cavity. Aortic rupture observed, likely cause of internal bleeding. Extensive ulceration and perforation in esophagus and stomach; fluid in left lung. Tox screen ordered; confirmed for Clartaxin; traces of same found in goggles.

Family history absent of chronic cardiovascular, respiratory, or systemic pathology

TOXICOLOGY *Peripheral Blood (Femoral): Clartaxin 5.9 mg/L*
REPORT: *Volatiles / Comprehensive Drug Screen: Blood Ethanol = 0.00%;*
 Illicit Substances and Common Pharmaceuticals = NEGATIVE

OPINION: *The deceased was a healthy, well-built 18-year-old male with no significant medical history. The deceased died rapidly from cellular asphyxiation following exposure to a lethal dose of Clartaxin, a highly lethal synthetic poison. The absence of external physical trauma, complete lack of underlying disease, and toxicological confirmation of Clartaxin – both in the victim and the swim goggles worn – fully support the classification of this death as a HOMICIDE.*

Signed: *Logan Cobb, M.D.*

Enyo Ehd, Ph.D.
Adolescent Therapy

Therapy Session Notes

Patient: *Grady Quartz, 14 year old, male ("GQ")*

Start Date: *June 20, 2025; in-person, 1-hour sessions*

Initial Complaint(s): *Impulsive and reckless behavior*

Session #1 – June 20, 2025 – *Introductory session with patient GQ and parent/guardian (Charlie) in first few minutes. GQ presented by Charlie following behavioral concerns at home and discovery of laser pointer used at airplanes. Excused Charlie after standard introduction of session structure and purpose; asked GQ why he thought he was in therapy. GQ reports being treated differently by people in authority, blamed for things he did not do, then punished because people "assume I am the problem without evidence." Allowed GQ to speak freely during session. He is guarded initially; more conversational when discussing school, especially science, and swimming. Admits to having the laser pointer but denies, many times, pointing at any airplanes. Says obtained laser from friend, Kennedy, day after cop accusation but no one would ever believe him about that timing. Angry and preoccupied with neighbor who made several reports to police; says "Whitacre is out to get me" / "liars must pay"*

Discussed treatment expectations and session structure, confidentiality, anger management, and strategies for handling conflict, including false accusations. Grady denies depression, thoughts of harm to self or others, or any recent physical aggression. Initial goals include development of rapport, improved impulse control, accountability for behavior, and identifying alternatives to retaliatory acts. To continue with bi-weekly sessions. Possible diagnoses: oppositional defiant disorder, ADHD, intermittent explosive disorder; disruptive mood dysregulation disorder. Clear theme of impulsive and retaliatory behavior based on first session; to be revised after further sessions. Advised Charlie to watch for any signs of mischief.

Enyo Ehd, Ph.D.
Adolescent Therapy

Session #2 – July 3, 2025 – *Rescheduled due to July 4 holiday

GQ shows accountability for the laser beam but repeats denial of using on airplanes; fixation on Whitacre (neighbor) for calling the cops on him several times. Discussions about prior interactions with Whitacre; GQ denies having any other than hellos in presence of Charlie. GQ denies ever going to Whitacre's property but admits thinking about it. GQ argumentative when asked if he was happy neighbor's car had been covered in paint – "Why would I be happy if I didn't do it?" Shifted to positive subjects. GQ enjoys practicing swimming at local Texoma pool; likes the solitude and time to focus; appears quite disciplined. Insight on GQ still limited at present, but signs GQ is stir-crazy; has been grounded a long time.

Spoke to Charlie after session – advised to increase monitoring of GQ in case of retaliatory acts against neighbor or property, or escapes from home, especially late at night. Charlie confirms; emphasized their home security system; beeps on every exit; states they took away GQ's phone and laptop after laser discovery; GQ grounded but allowed to walk to Texoma pool and back for practice (2-3 hours); no friends can visit. Diagnosis leaning toward DMDD.

Session #3 – July 18, 2025 –

GQ in much better spirits. GQ previously disliked helping Charlie at farmer's market on Saturdays but is excited for one tomorrow; friend Kennedy will be there. GQ still grounded without electronics; asked if he missed his stuff, and GQ shrugged "I guess so but I'm learning that I can live without them." GQ talked a lot about swimming and try-outs for high school team; no mentions of Whitacre. GQ again shows marked positive behavior and spirits when discussing time practicing swimming at Texoma pool – "My solitude"; "Time to think"

Discussed retaliation cycles and alternatives to direct confrontations / impulsivity. GQ receptive to discussions but harboring frustration with adults who he believes have not adequately "heard" him – although vague with this reference. "It's kind of like a bully, you know; if you don't ever push back, the bully will keep bullying and ignoring your plea."

Enyo Ehd, Ph.D.
Adolescent Therapy

Session #4 – August 1, 2025 –

GQ more muted, less positive spirits today. GQ says he feels lonely because of isolation / stuck at home. Farmer's markets are the "only time I get out of my cell". Discussed differences in age-appropriate privacy and concealing unsafe or dangerous behavior. GQ reports liking to work independently without anyone over his shoulder – repeats enjoying time at Texoma pool and doing lab experiments. Denies having anything dangerous or illegal or hidden; says with a sigh that Charlie regularly searches his room and basement when "cleaning up the house." Discussed working on building trust through honesty, hard work, good behavior, and respecting boundaries. GQ says he is an open book at home.

Spoke with Charlie after session to relay GQ's feelings of isolation and loneliness; recommended limited use of computer and phone under Charlie's supervision; encouraged Charlie to allow friend Kennedy to visit too.

Session #5 – August 15, 2025 –

GQ in best mood since therapy began. Spent nearly all of session talking about high school (starts next week), swim team try-outs, and getting more time outside of home. Received syllabus and homework for some classes already. Appears eager to start school; very interested in the first set of assignments in AP Chemistry. No mention of Whitacre or any signs still preoccupied with him, police, or any grudge/revenge. Zero signs of loneliness or isolation; gradual use of electronics and visits from Kennedy have shown clear success.

Charlie reports exceptionally good behavior at home; GQ is studious, focused on swim training, and extremely helpful around the house. GQ extremely excited about new black swim goggles and cap that Charlie agreed to order. GQ spends very little time in his room, often studying in the living room while Charlie watches TV; helps in garden every day. I am doubting my DMD potential diagnosis; may have been temporary act without underlying disorder. Or could it possibly be Rexfordism?? Would need much further observation.

Session #6 – September 5, 2025 – *rescheduled from August 29

GQ is visibly distressed; clear contrast in mood and behavior from prior session. Most negative yet but very talkative; loses breath several times mid-sentence. Issue with Julien (senior) and swim coach (Flynn) – sabotage during try-outs kept him off Varsity. GQ very upset after no help from coach; GQ fixated on the perceived unfair treatment and injustice – being called "Goldy," like a goldfish. Long discussion about black swim goggles and cap; GQ likes wearing black and always has; Julien says only he can wear black. GQ nervous to ask Charlie to order different colors because of cost. Seems unbothered by "Goldy" nickname.

Further discussed and explored coping mechanisms and strategies for handling anger and conflict. GQ denies plans or thoughts of harming or seeking revenge against Julien or Coach. When I questioned his sincerity, dramatic shift in behavior – GQ almost robotic in answers, as if thinking through them before speaking. Every answer flat in tone, much different than before: "I now understand you cannot control some things, doctor." To consider Rexfordism.

**September 6 – called Charlie; explained signs to watch for (re potential Rexfordism) due to similar grievance perception by GQ; noted he's far more emotional and fixated this time. Instructed to watch for and strictly monitor online activity, E-Mazon purchases, seclusion or isolation, and continued fixation on Julien, Coach, or try-outs. Same for any outward attaches or actions against Julien or Coach. Charlie confirms instructions; seen nothing yet.*

Session #7 – September 19, 2025 –

GQ suspended one week from school; happened yesterday; various pranks by GQ on Julien (senior saboteur) over previous two weeks; reports no signs they were asked to look for. States GQ was perfect up to that point and "disintegrated." GQ refuses to speak at session; completely mute with no emotion; attempted for twenty minutes; rescheduled for Monday. To read transcript and reminded Charlie it was important to report these things.

Session #8 – September 22, 2025 –

Reviewed discipline transcript prior to session. While tone unclear, clear signs of GQ feeling injustice, false accusations, and not being heard. Charlie reports good behavior over weekend but not much talking; only in room to sleep; has clean room, helps around house and garden.

GQ willing to speak today – but short answers. Answers follow-up questions but I have to probe and pull for more information. GQ willing to discuss discipline hearing at the school; states it was highly unfair with a predetermined outcome – similar to what I read in transcript. GQ flat and unemotional when describing Coach Flynn who was on discipline board. Reminded of strategies for handling anger and conflict. GQ repeated several back to me verbatim; appears to have been intently listening in prior sessions at least.

After session, recommended to Charlie prescribing GQ low-dose sedative to keep GQ relaxed and guard against possible revenge planning. Charlie refuses; believes it will turn son into a "zombie kid," but agrees to have daily sessions all week during suspension.

Session #9 – September 23, 2025 –

GQ appears consistent with Charlie's report – improved demeanor and willingness to speak compared to yesterday. Asked if he wanted to talk about any of the pranks; GQ described lab explosion in Coach Flynn's chemistry class as scary and unexpected. Denies having anything to do with explosion. States several times it would've been impossible for him to do it, but each time GQ was notably even in tone; no signs of hostility or anger. Asked mostly open-ended questions near end of session. Notable – when asked how he thinks the explosion happened: "Julien is a jock and a bully; he's no Einstein." GQ made himself laugh when he said it; was perfect time to end session a few minutes early.

Session #10 – September 24, 2025 –

Charlie reports same at home – continued good behavior; no talk of Julien, coach, try-outs. GQ in cheerful mood; "Good afternoon, Dr. Ehd. I'm glad we can keep chatting." GQ gives longer answers without prompting. GQ denies setting up the confetti bomb but says he does think it is funny. "I wish I had seen it, if I'm being honest, doc." Subtle shift in tone when GQ moved to the desk prank; slightly more guarded; some signs of indignation with more emphasis in his denial of tampering with Julien's desk. On his own, admits he knows how someone could tamper with a desk like that but only because he stares at his own desk in English and history class because they bore him. "I mean, any screwdriver would work,"

After session, tried recommending sedative again but Charlie refuses again. "Why would I mess with a good thing; Grady is doing remarkably well at home and school."

Session #11 – September 25, 2025 –

GQ presents same as yesterday. Focused session on coping mechanisms and anger management since pranks well covered. GQ listens intently, gives lengthy responses but pauses slightly before every answer; several questions about me and my practice. Pressed GQ about any plans, dreams, or thoughts of harming or getting back at Julien. GQ continues to deny having any; now states "I'm over it, him and Coach. I just want to get back to school. I feel like I'm back in my house prison like over the summer."

Session #12 – September 26, 2025 –

GQ is very positive; visibly happy to be back at school. Talked at length about school, including a battle they were studying in history class. Was able to re-join swim practice this morning; asked how it was seeing Julien and Coach again. "Like I said, doc, I'm over them. Being back in the water was all I needed." Back to bi-weekly sessions going forward; reminded Charlie to watch for any changes in behavior, no matter how small.

Session #13 – October 10, 2025 –

Two weeks since daily session and suspension; Charlie reports no troubling signs at home and consistently good behavior at home; no isolation; improving grades; becoming good friends with Kennedy who visits at least once a week. Confirms E-Mazon check; no concerns. No signs of preoccupation with any prior issues (Julien, coach, try-outs, neighbor) at home. GQ did ask Charlie permission to order a small beaker set, which Charlie agreed to based on the continued good behavior. Charlie reports GQ also asking Julien for help at swim practice.

GQ polite, talkative, genuine, and engaged. GQ explains two times he used coping mechanisms with success. One time was after Julien excessively called him "Goldy" that day, at swim practice, in class, and in the hallways. GQ says Julien will go away when he realizes that he isn't getting any reaction from GQ, but does not deter him from asking Julien for help at swim practices. An exceptional improvement rate by GQ.

**Call from Charlie on Oct. 17 – reports no concerning signs; "all good here." States GQ is really improving at swim after seeking help from Julien. "Who would've thought, doc"*

Session #14 – October 24, 2025 –

Pre-call from Charlie giving heads up that Grady fixated on some perceived unfairness related to a science grade. GQ continues positive behavior and remains engaged in sessions. Asked several follow-up questions today on anger management because he is upset with himself after not getting a perfect grade on a chemistry assignment. Clear focus on extra credit possibility from school science fair, an excellent coping strategy. Discussed same with GQ. Some concern about GQ obsession with lower grade on lab report; 93 compared to Kennedy's 100 despite them handing in basically the same report; reiterated coping strategies.

Spoke to Charlie after session; asked if there had been anything unusual in the last two weeks – unfamiliar packages or orders, new items in Grady's room that Charlie had never seen before, or unusual fixations. Charlie affirmatively says "no".

Session #15 – November 7, 2025 –

GQ in good spirits but pensive; he's curious if he should ask school if he can compete in swim championships later this month; encouraged him to ask given significant behavioral improvement. I understood the school was as impressed with Grady's improved behavior as Charlie was. Discussed coping mechanisms again, especially with disappointment, in case school did not allow him to compete. GQ still very engaged in sessions, talkative, occasional laughter, and polite. GQ is animated / clearly excited about an upcoming science fair competition; has been working on experiment for weeks and very eager to show it off. Claims to have endured more teasing from Julien, including more "Goldy" nickname in class and at swim practice, but demonstrates extremely mature response. GQ states that he thinks he might be faster than Julien now; "I'll beat him soon enough." Appears unbothered by prior issues. Numerous voluntary engagement with prior target – Rexfordism doubted.

Charlie has not found anything concerning at home nor any hiding places; says they have not seen any secretive or isolating behavior; GQ remains very open and helpful at home.

Session #16 – November 21, 2025 –

GQ is in best spirits of any session; downright giddy. He is extremely excited; the school has allowed him to compete in the state swim championships (tomorrow). GQ has two races. Repeats (4x) that he wants to win them both – "by a mile, so there is no question." GQ says he's much faster in the pool, in part due to some good tips and techniques that Julien explained during practices. Told GQ that he should be proud of himself and being willing to take instruction from someone that he previously harbored such animosity toward. GQ thanked me and had a soft smile of genuine emotion.

International Travel and Document Encounter Summary

Prepared for investigative review | Reference No. TXM 25-1111 | Generated November 27, 2025

SUBJECT 1	MORGAN SNYDER	SUBJECT 2	GRADY QUARTZ
STATUS	Adult • U.S. Expatriate • Resident of France	STATUS	Minor (14yo) • U.S. Citizen
DOCUMENT	U.S. Passport No. XXXXX[2447]	DOCUMENT	U.S. Passport No. XXXXX[1949]

SUMMARY OF RESULTS

Encounter records show the Adult Subject Snyder entering Texoma on November 24, 2025, and then departing with Minor Subject Quartz on the next scheduled service to Paris. Within approximately 36 hours after arrival in Paris, both passports generated successive travel or identity-verification records in France, Belgium, Germany, Switzerland, and Italy. No later carrier manifest, border encounter, or passport-query record was located. All times are local to location; D represents November 24, 2025.

CHRONOLOGY OF RECORDED ENCOUNTERS

DATE TIME	COUNTRY CITY	LOCATION	RECORD TYPE	SUBJECT
[D-1] 20:41	Paris, France	Charles de Gaulle Int'l Airport CDG	Inbound carrier manifest and primary inspection	Snyder only
[D-1] 22:12	Paris, France	CDG departure control	Outbound passenger record	Snyder only
[D] 06:41	Texoma, USA	Texoma Int'l Airport TXA	Carrier API and passport verification	Snyder only
[D] 08:44	Texoma, USA	Texoma Int'l Airport TXA	Inbound carrier manifest and primary inspection	Snyder only
[D] 10:42	Texoma, USA	TXA departure control	Outbound passenger record	Both
[D+1] 03:55	Paris, France	Charles de Gaulle CDG	Carrier API and passport verification	Both
[D+1] 17:46	Brussels, Belgium	Bruxelles Midi rail terminal	Transport identity document scan	Both
[D+1] 23:58	Aachen, Germany	Federal Police mobile control	Schengen internal control encounter	Both
[D+2] 11:21	Basel, Switzerland	Basel SBB joint border zone	Federal Customs identity query	Both
[D+2] 15:37	Como, Italy	Chiasso Como corridor	Border police document check	Both
